INTENDED AUDIENCE

This manual is intended for users identified as 'Responsible Persons' or 'Distributors' in the meaning below.

It explains the main functions of CPNP.

- **Cosmetic industry responsible persons** and users acting on their behalf – referred to in this User Manual as 'Responsible Persons' (RP)';
- **Distributors** who make available in a Member State a cosmetic product already placed on the market in another Member State and translate, on their own initiative, any element of the labelling of that product in order to comply with national law – referred to in this User Manual as 'Distributors".

Readers are kindly invited to report any remark on this User Manual to: **grow-cpnp@ec.europa.eu**.

1. Overview

1.1. INTRODUCTION

The Cosmetic Products Notification Portal (CPNP) is the online notification system created for the implementation of Regulation (EC) No 1223/2009 on cosmetic products. When a product has been notified in the CPNP, there is no need for any further notification at national level within the EU. Regulation (EC) No 1223/2009 (Article 13) requires that the Responsible Persons (RP) (p. 7) and, under certain circumstances, the distributors of cosmetic products submit some information about the products they place or make available on the European market through CPNP. CPNP is making this information available electronically to competent authorities (for the purposes of market surveillance, market analysis, evaluation and consumer information), poison centres or similar bodies established by EU countries (for the purposes of medical treatment).

Regulation (EC) No 1223/2009 (Article 13) lists all the information to be notified through CPNP about cosmetic products placed or made available on the European market.

Please note that the fact that a product has been successfully notified through CPNP does not imply that the product in question fulfills all the requirements of Regulation (EC) N° 1223/2009 on cosmetic products. The Responsible Person shall ensure compliance with the relevant obligations set out in this Regulation.

1.2. KEY TERMS & CONCEPTS

This section presents a number of key terms and concepts which are used in CPNP and which will be useful to understand before you start reading this User Manual or using the application:

CMR Substances

Substances classified as carcinogenic, mutagenic or toxic for reproduction pursuant to Regulation (EC) No 1272/2008. In general, the use of CMR substances is prohibited, apart from in exceptional cases — see Article 15 of Regulation (EC) No 1223/2009.[1]

(Single or multi-)Component Products

The information to be provided about a cosmetic product in CPNP differs whether the product contains a single component or multiple components. It is therefore essential to understand the difference before you start notifying your products.

- **Single component products**
  A 'single component product' is a product that is composed of one single element. E.g. a single jar of moisturising cream, a single bottle of shampoo, a lipstick tube, a single bottle of aftershave, etc.

[1] OJ L353, 31.12.2008, p.1

- **Multi-component products**
  A 'multi-component product' is a product consisting of several components that are not marketed separately. E.g. hair dye sets, skin peeling kits, permanent styling products, anti-age/revitalizing kits, etc.

Please note that the distinction between single and multi-component products has nothing to do with the fact that the product contains several ingredients/substances or only one in its composition! A component is an item/element of a product, not an ingredient/substance. Sets do not need to be notified as multi-component products provided that all components that compose this set have been notified individually.

Contact Persons

For each cosmetic product notified, the Responsible Person (p. 7) shall indicate the contact details of a physical person to contact in the case of necessity.

CosIng (Cosmetic Ingredients Database)

CosIng is a European Commission database that contains information on cosmetic substances and ingredients. The database includes all data since the adoption of the Cosmetics Directive 76/768/EEC in 1976.[2]

Cosmetic Products

Article 2 of Regulation (EC) No 1223/2009 defines a cosmetic product as 'any substance or mixture intended to be placed in contact with the external parts of the human body (epidermis, hair system, nails, lips and external genital organs) or with the teeth and the mucous membranes of the oral cavity with a view exclusively or mainly to cleaning them, perfuming them, changing their appearance, protecting them, keeping them in good condition or correcting body odours.'

Delegates For Nanomaterials

'Delegate for nanomaterials' is a specific profile restricted to notifications under Article 16 of Regulation (EC) No 1223/2009 on cosmetic products which requires that, in addition to the notification under Article 13, cosmetic products containing nanomaterials (p. 6) shall be notified to the Commission by the Responsible Person (p. 7) 6 months prior to being placed on the market. However, the provisions of Article 16 do not apply to nanomaterials used as colorants, preservatives or UV filters regulated under Article 14, unless expressly specified. To do so the Responsible Person can mandate a *Delegate for nanomaterials*. The Delegate for nanomaterials is then required to enter in CPNP details of the notification of non-regulated nanomaterials.

A Delegate for nanomaterials cannot notify products as part of Article 13!

Distributors

'Distributor' means any natural or legal person in the supply chain, other than the manufacturer or the importer, who makes a cosmetic product available on the Community market. Distributors have to submit through CPNP some information related to the products they distribute (*see* Managing Distribution Notifications Pursuant To Art. 13(3) (p. 62)) **only if they want to distribute products in an EU Member State and they translate –on their own initiative– any element of the labelling of those products to comply with national law**. The products in question have to be registered in the CPNP by the Responsible Person (p. 7) beforehand.

[2] http://ec.europa.eu/growth/tools-databases/cosing/.

EU Login

EU Login (formerly known as 'ECAS') is the European Commission Authentication Service with which people can access different applications and services offered by the European Commission, including SAAS (p. 7) and CPNP.

Having a valid EU Login account is required to be able to request access to CPNP via SAAS.

For information on how to create and manage your EU Login account, please consult the EU Login Tutorial at https://webgate.ec.europa.eu/cas/manuals/EU_Login_Tutorial.pdf.

Frame Formulations

'Frame formulation' means a formulation which lists the category or function of ingredients and their maximum concentration in the cosmetic product or gives relevant quantitative and qualitative information whenever a cosmetic product is not covered or only partially covered by such a formulation.

Importers

'Importer' means any natural or legal person established within the Community, who places a cosmetic product from a third country on the Community market.

Local Administrators

A 'Local Administrator' is a person within an organization, who is able to manage the access requests from other people to his/her own organization, as well the details of his/her organization. 'Local administrator' is a role in SAAS (p. 7). The first person who creates his/her organization in SAAS in order to access CPNP automatically becomes the Local Administrator for this organization.

Making Available On The Market

'Making available on the market' means any supply of a cosmetic product for distribution, consumption or use on the Community market in the course of a commercial activity, whether in return for payment or free of charge.

Nanomaterials

Article 2 of Regulation (EC) No 1223/2009 defines a nanomaterial as 'an insoluble or biopersistant and intentionally manufactured material with one or more external dimensions, or an internal structure, on the scale from 1 to 100 nm.'

Organizations

An Organization in CPNP is a generic term to refer to a Responsible Person (or its sub-organizations), a Distributor, a Competent Authority or a Poison Centre.

Placing On The Market

'Placing on the market' means the first making available of a cosmetic product on the Community market. According to Art. 4.1 of Regulation (EC) No 1223/2009, 'only cosmetic products for which a legal or natural person is designated within the Community as ‘responsible person’ shall be placed on the market'.

Product Names

The name of a cosmetic product in the Member State(s) in which it is made available. The product name must be detailed enough to enable the specific identification of the cosmetic product. It should include the trade mark/brand, the product line and the specific name of the product as they appear on the packaging. The complete name should also include the product function unless it is clear from the product presentation.

Responsible Persons (RP)

Cosmetic products can only be placed on the EU market if a legal or natural person was designated as a 'Responsible Person' for those products within the EU. Responsible Persons have to ensure compliance with the obligations set out in Regulation (EC) No 1223/2009.

Who is the Responsible Person?

- For products which are manufactured in the EU (and not subsequently exported and imported back into the EU) and marketed in the EU, the EU manufacturer is considered to be a Responsible Person (unless another person established in the EU has been mandated).
- If the manufacturer is established outside the EU, then a Responsible Person established in the EU must be appointed.
- The Distributor shall be the Responsible Person where he places a cosmetic product on the market under his name or trademark or modifies a product already placed on the market in such a way that compliance with the applicable requirements may be affected.
- For imported cosmetic products manufactured in a non-EU country, each Importer shall be the Responsible Person for the specific cosmetic products he places in the market. The Importer then has to request a Responsible Person profile (unless another person established in the EU has been mandated).

Because the container and packaging of a cosmetic product have to bear the Responsible Person's name or registered name ('*in indelible, easily legible and visible lettering*'), it is essential, when creating an organization with a Responsible Person profile in SAAS (see below), that the Responsible Person's details correspond exactly to the information visible on the labelling!

SAAS (SANTE Authorization System)

SAAS is the authorisation system from the European Commission's Health and Food Safety Directorate General (i.e., 'DG SANTE') that provides users with a profile and access rights to specific European Commission IT systems, including CPNP.

You need to have a valid SAAS account, with a role in an active organization, to be able to access CPNP. The first person who creates his/her organization in SAAS automatically becomes the *Local Administrator* for this organization and is then in charge of reviewing and accepting subsequent access requests from other people to the same organization.

SAAS URL: https://webgate.ec.europa.eu/saas/ (requires a valid EU Login (p. 6) account).

Shades

An individual colour variant of a cosmetic product. E.g. the different color names for the same lipstick, like 'Pure rouge', 'Ruby', 'Vermeil', etc.

2. Getting Started

2.1. PREREQUISITES

1) The following ***system requirements*** are necessary in order to connect to CPNP:

- An Internet connection;
- A computer screen resolution of at least 1024 X 768 pixels.

CPNP is optimized for use with recent versions of Microsoft Internet Explorer, Mozilla Firefox and Google Chrome (JavaScript and cookies enabled).

2) The following ***preliminary steps*** are required in order to start CPNP:

Step 1 – Create an EU Login account

You need to have a valid EU Login (p. 6) account, with a unique EU Login name and a password of your choice.(For information on how to create an EU Login account, please consult the EU Login Tutorial at https://webgate.ec.europa.eu/cas/manuals/EU_Login_Tutorial.pdf).

Step 2 – Create a SAAS account

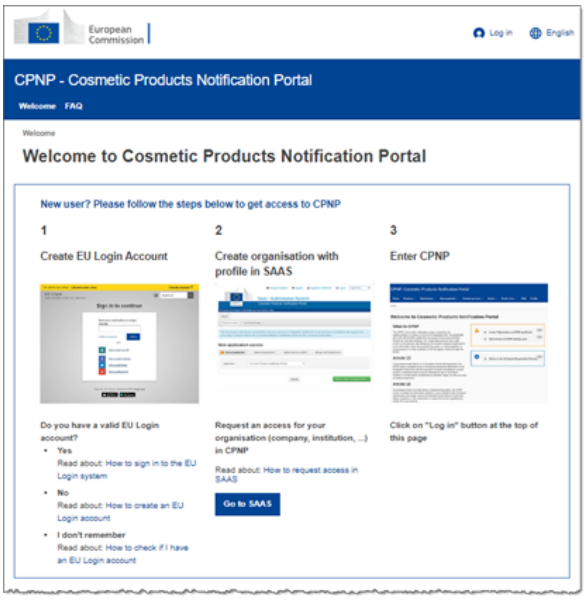

You need to have a valid SAAS (p. 7) account with a role in an active organization + a specific profile in CPNP.

2.2. STARTING CPNP

To start CPNP with your SAAS-EU Login account

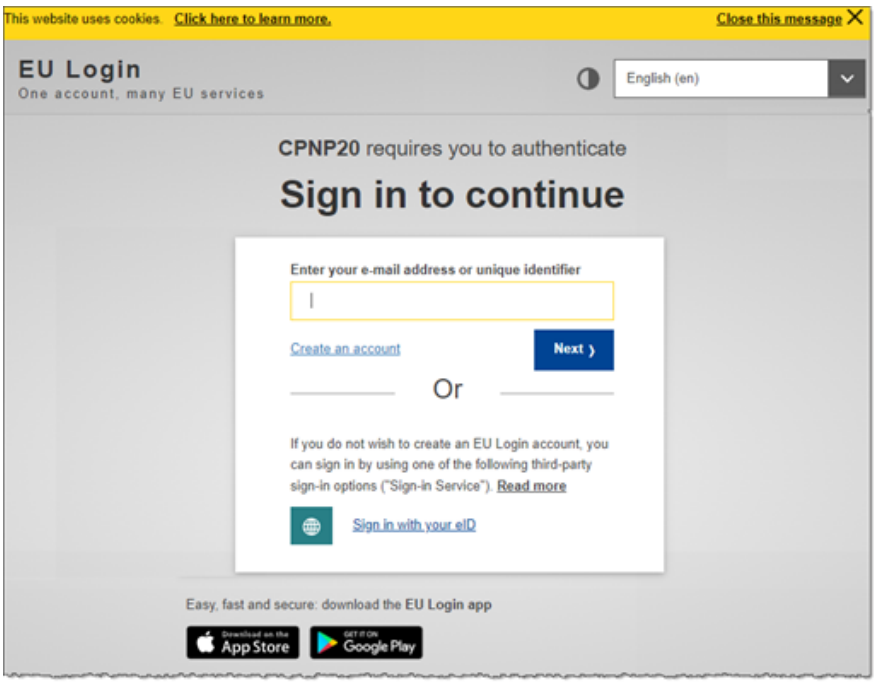

1. Type the following URL in the address bar of your browser and press **Enter**:
   https://webgate.ec.europa.eu/cpnp

   The Welcome page recaps the steps necessary to access CPNP:

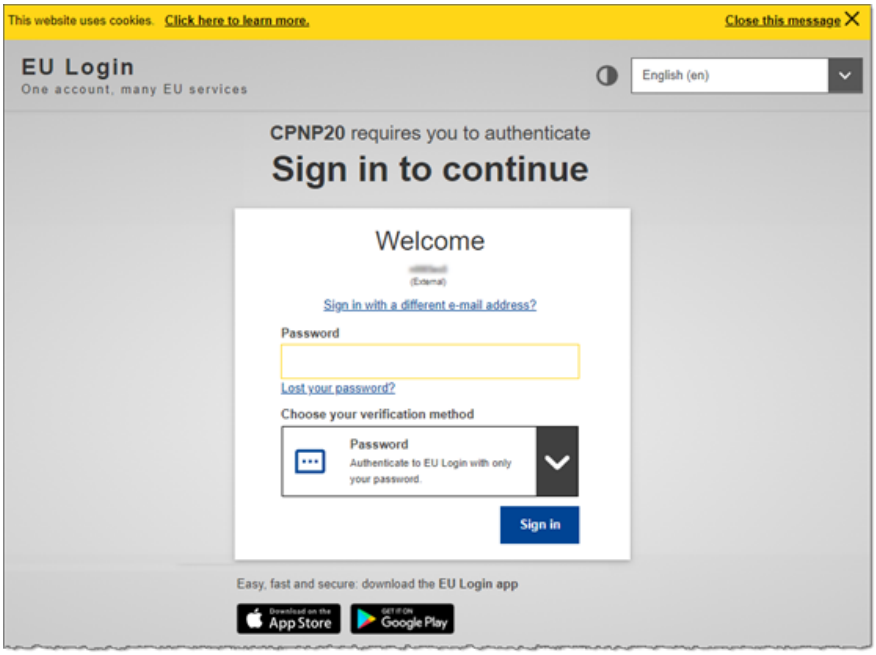

2. If you have successfully completed preliminary steps 1 (EU Login) and 2 (SAAS) as explained on the previous page, click **Log in** at te top right of the *Welcome* page.

   The first part of the EU Login – Sign in page prompts you to enter your email address:

3. Enter your EU Login email address and click **Next**.

   The second part of the EU Login – Sign in page prompts you to enter your EU Login password:

4. Enter your EU Login password, and then click **Sign in**. (Should you have forgotten your EU Login password, you can click the '*Lost your password?*' hyperlink under the 'Password' box to set a new one).

   You are now connected to CPNP. The CPNP homepage is displayed.

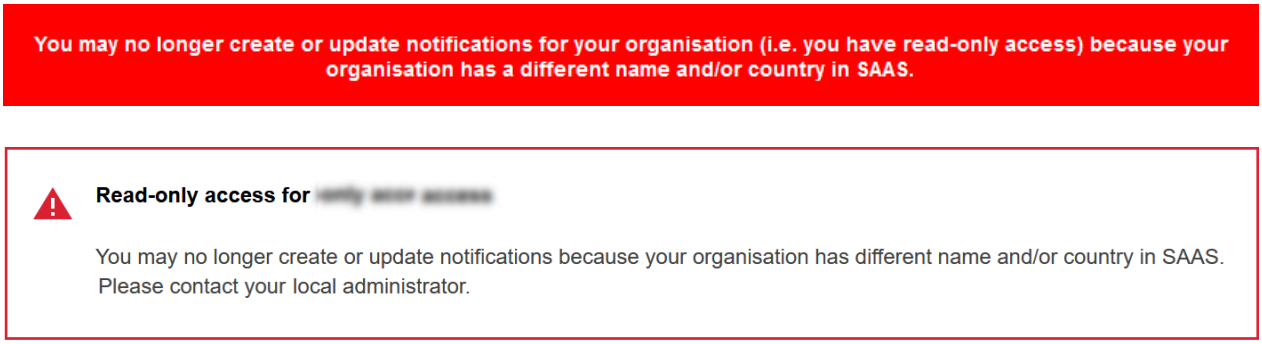

2.3. MEETING THE INTERFACE

2.3.1. The CPNP Homepage

The CPNP homepage gives general information about the notification process under Articles 13 and 16 of Regulation (EC) No 1223/2009. You may also occasionally find announcements of updates and recent developments in the application (e.g. new features available, tips, guidance, maintenance interventions).

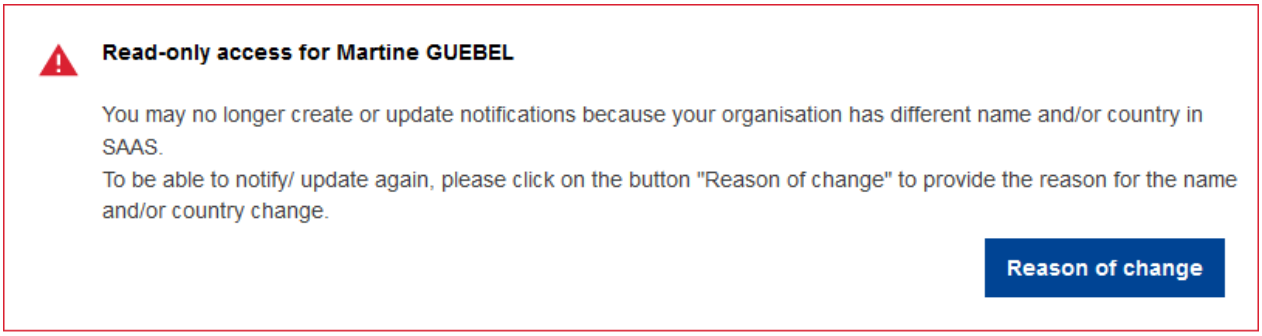

2.3.2. Organization Change Warnings

Should the name and/or country of your organization have been modified in SAAS since the last time you logged in to CPNP, warnings will show at start-up if your organization has already notified some products. These will inform you that CPNP has become read-only for your organization:

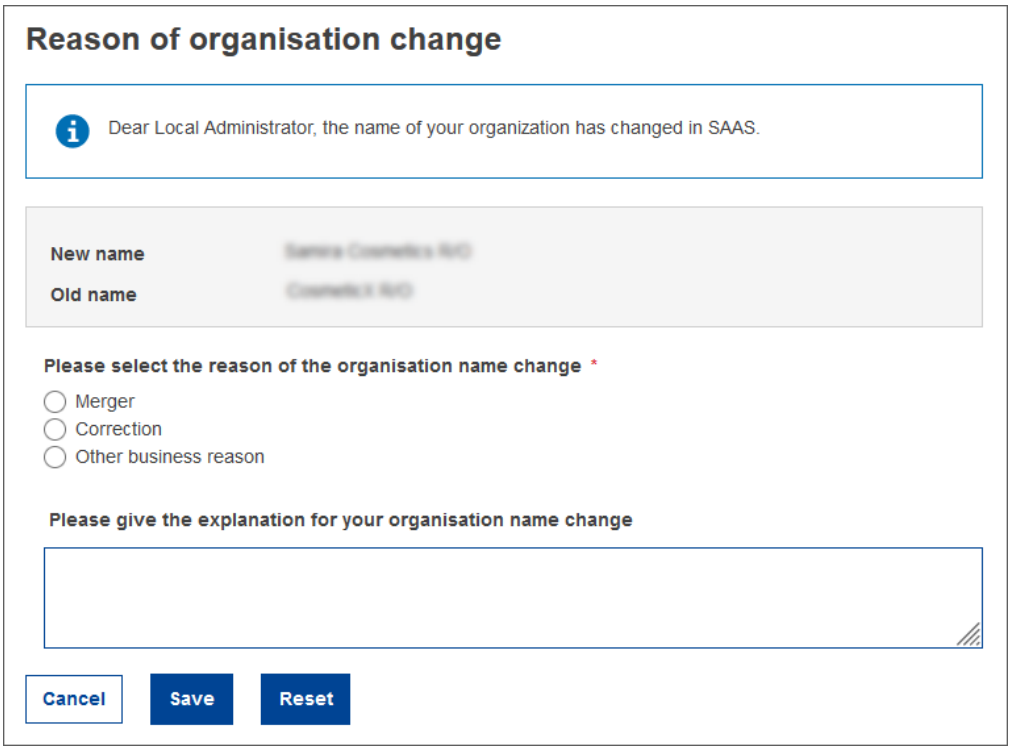

When this happens, an action is required from your Local Administrators (p. 6) to lift this read-only restriction.

If you are the Local Administrator, the second warning will be slightly different, with a button to perform the required action i.e., justify the change of name and/or country:

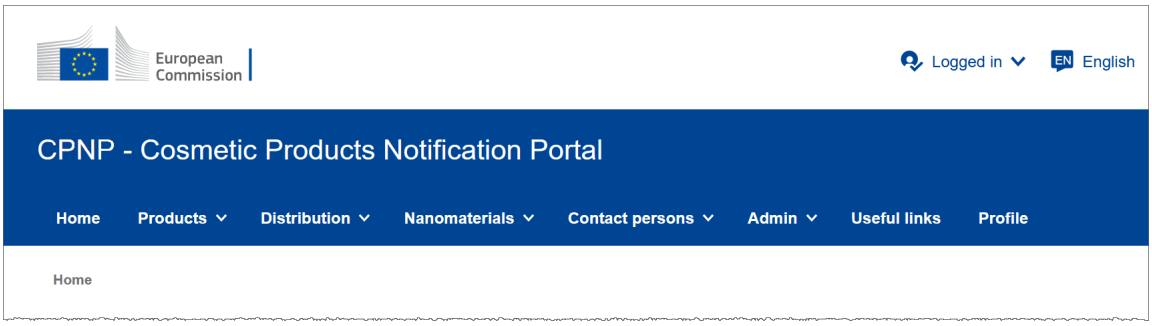

Clicking the **Reason of change** button, the Local Administrator will be presented with instructions to lift the restriction depending on the type of change that was made. For example, if only the name of the organization was changed, the Local Administrator needs to explain whether the change resulted from a merger, a simple name correction or any other business reason:

The read-only restriction will be lifted for all CPNP users in the organization once the Local Administrator's change justification is validated in the system.

For details of the organization change justification procedure, please refer to Applying Organization Changes (p. 58).

2.3.3. Interface Components

2.3.3.1. Menu Bar

The menu bar contains the following menus: **Home**, **Products**, **Distribution**, **Nanomaterials**, **Contact persons**, **Admin, Useful links** and **Profile.**

▶ Home

Use this menu to go back to the homepage.

▶ Products

The **Products** menu is available to Responsible Persons only. Distributors do not have this menu. This menu offers the following menu options i.e.

- **My notifications**
  Overview of all products (i.e., *Draft* and *Notified*) which are specifically attached to your RP/Organization.

- **Notify a product**
  Used by the Responsible Persons to create notifications for single or multiple component products.
  See Notifying Products (p. 14).

- **Simple products search**
  Search for products or components using keywords i.e., text appearing in product names, component names, responsible person names, distributor names, CPNP references, etc.
  See 'Using the Search Tools': Simple Search (p. 66).

- **Advanced search**
  Search for products or components using more specific criteria, including all product characteristics and/or category and formulation details of the searched product or component.
  See 'Using the Search Tools': Advanced Search (p. 68).

▶ Distribution

The **Distribution** menu is available for Responsible Persons and Distributors. If you are a Distributor, use this menu to enter distribution notifications or to search for notifications that you have previously entered in the system.

See Managing Distribution Notifications Pursuant To Art. 13(3) (p. 62).

▶ Contact persons

The **Contact persons** menu is available for Responsible Persons only. Use this menu to manage (create, modify, delete) and search details of all contact persons associated with your Organization.

See Managing Contact Persons (p. 56).

▶ Nanomaterials

The **Nanomaterials** menu is used to notify nanomaterials. Regulation (EC) No 1223/2009, Article 16, requires that, in addition to the notification under Article 13, cosmetic products containing nanomaterials shall be notified to the Commission by the Responsible Person by electronic means six months prior to being placed on the market. Please note that this specific module will not be described in this manual but in another dedicated manual that can be consulted from the **Useful links > ART. 16** menu.

▶ Admin

The **Copy your products to another Responsible Person** option in the Admin menu is used to transfer some of your products to other Responsible Persons (for example in case of a merger or Responsible Person change of name). A copy of the selected products will be saved, in DRAFT, under the new designated Responsible Person. Please note that all the information is copied, except for the packaging and labelling information and the contact person details.

The Admin menu also offers a **Move products** option if your Organization has sub-organizations. Using this option, you will be able to move products from the main organization or from one of its sub-organizations to another one of the sub-organizations or to the main organization.

▶ Useful links

This menu provides links to the '*Tutorial*' (i.e., the page with instructions on how to get access to CPNP), the Frequently Asked Questions (FAQ), Q&A on nanomaterials, Request form, Releases, Regulation (EC) No 1223/2009 on cosmetic products, documentation about Article 13 (i.e., user manual, frame formulations, Cat./Frames/Triggered questions + an instruction package for using the upload web-service) and Article 16 (i.e.user manual) and SCCS guidance on nanomaterials.

▶ Profile

Use this hyperlink to check your CPNP profile, including your name, email address, language, postal address; the ID, name, contact email address, profile and any other known information about your Organization.

2.3.3.2. Language Selection Box

Use the language selection box at the top right of each page to change the interface language.

The CPNP interface and this User Manual were originally written in English. In case of doubt, please use the English version as reference and do not hesitate to report any issue or inconsistency to grow-cpnp@ec.europa.eu.

3. Using CPNP

3.1. MANAGING NOTIFICATIONS PURSUANT TO ART.13(1) / 13(2)

Notifications Pursuant to Articles 13(1) and 13(2) of Regulation (EC) No 1223/2009 are managed using the **Products** menu. Please note that this menu is available for Responsible Persons only. **Distributors do not have access to these features.**

3.1.1. Notifying Products

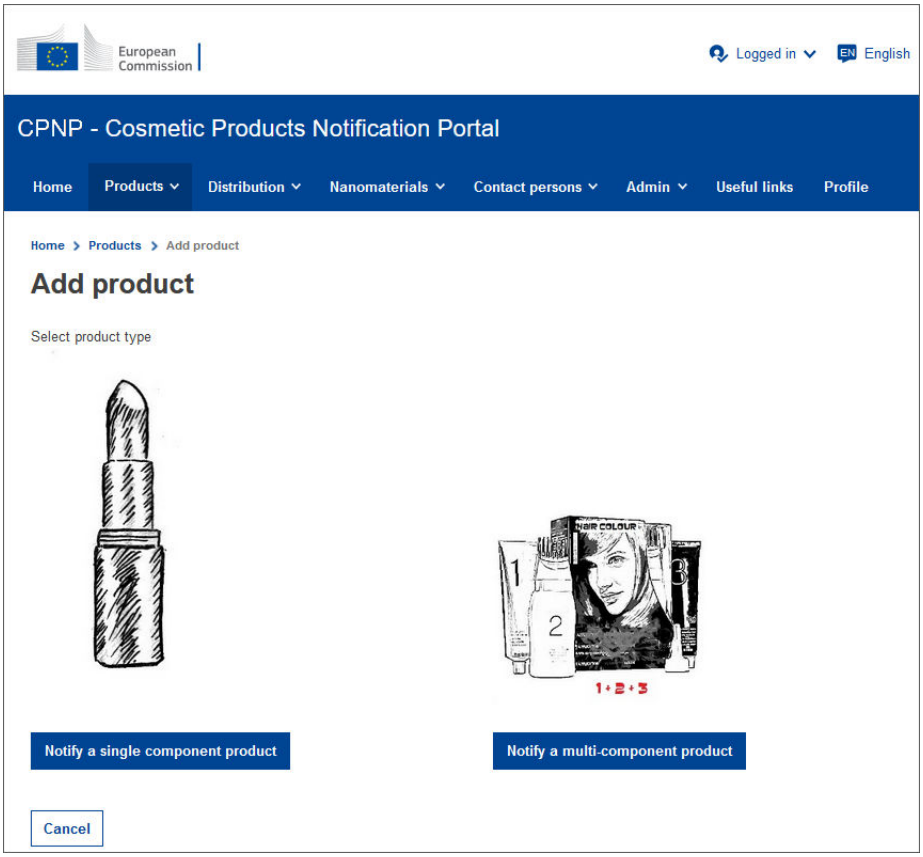

As per Article 13(1), Responsible Persons are required to submit certain information to CPNP prior to placing any cosmetic product on the EU market; as per Article 13(2), the Responsible Person is further obliged, when the cosmetic product is placed on the market, to notify to CPNP the original labelling, and, where reasonably legible, provide a photograph of the corresponding packaging.

These 2 requirements are accommodated for Responsible Persons through the **Notify a product** option in the **Products** menu.

To notify a product

1. In the **Products** menu, select **Notify a product**.

   *The **Add product** start page prompts you to select the type of product that you wish to notify:*

2. Select the type of product that you want to notify i.e., a single-component product (for details, please refer to Notifying a Single Component Product (p. 16)) or a multi component product (for details, please refer to Notifying a multi-component Product (p. 38)).
3. Complete the product detail page with all known information about the product (for details about each tab/field, please refer to the following pages).
4. To save the notification as draft (i.e., if you have not provided all mandatory information yet), click **Save as draft**.

   Please note that at least the product/component name and the corresponding language must be completed at this stage (as indicated by "**").

   Or,

   When the information on the notification is complete and all mandatory fields (indicated by a "*") have been filled in, click **Notify**. The information is then made available to Competent Authorities and Poison Centres.

   Please note that it is no longer possible to delete the notification after that. Only updates will be possible.

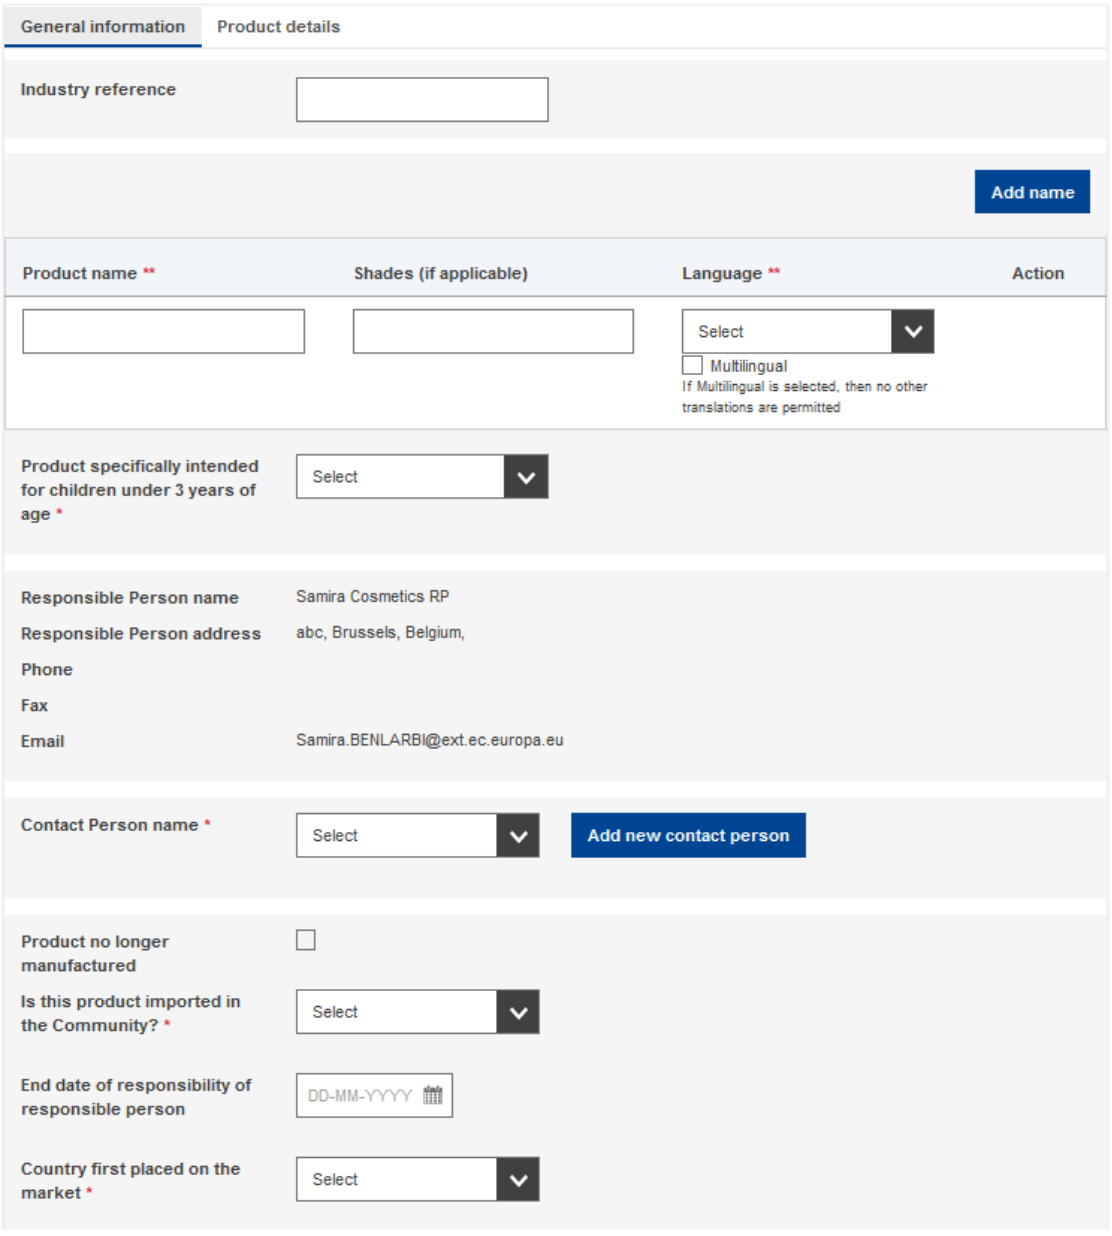

3.1.1.1. Notifying a Single Component Product

A single component product is a product that is composed of one single element (e.g. a single bottle of shampoo).

'General information' tab

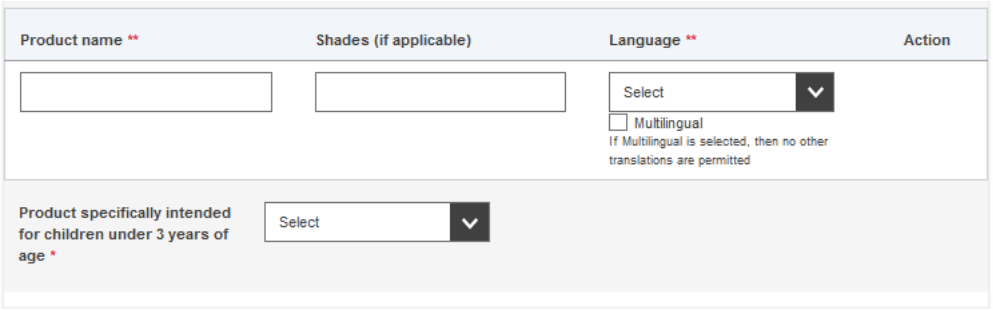

The **General information** tab allows Responsible Persons to enter the following information about the products that they are notifying:

▶ Industry Reference

The reference given to the product by the industry (only for industry's internal use).

▶ Product Name

The product name is a crucial element of the notification since it will be often used by Competent Authorities or by Poison Centres to search for a product in the CPNP.

The product name must be detailed enough to enable the specific identification of the cosmetic product. It should include the **trade mark or brand**, the **product line** and the **specific name** of the product as they appear on the product. The complete name should include the **function** unless it is part of the specific name of the product. Examples:

1. ▶ Trade mark or brand
2. ▶ Product line
3. ▶ Specific name (function included)

The complete name of the product is:

Trade mark or brand + product line + specific name (function included), *e.g*:

– Novea + Repair & Shine + smoothing cream

– Elisa Ardin + Five Minutes Cream + Intensive lip repair balm

– Chenal + Hydra Star + Serum Hydratant Repulpant Intense

– Yves St Vincent + Opium Bleu + Eau de parfum

▶ Shades (if applicable)

To avoid unnecessary notifications, you can notify the different shades of a product (*e.g.* different shades of a lipstick) into one single notification. This can be done only if all these shades are fully covered by the information contained in the notification.

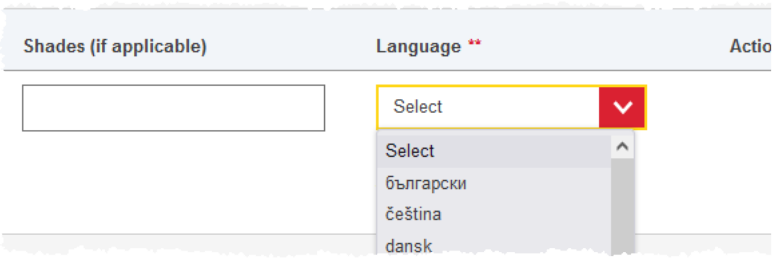

Enter the different shades in the Shades field, clearly separated by a forward slash (i.e. ' / ') preceded and followed by a white space.

The Shades field is limited to 2000 characters for reasons of legibility.

The translations of these shades in the different languages have to be indicated in the Shades field just below the corresponding linguistic version of the product name.

Please note that when some shades of a cosmetic product are not fully covered by the information contained in the notification (*e.g.* different composition information), they must be notified separately.

▶ Language

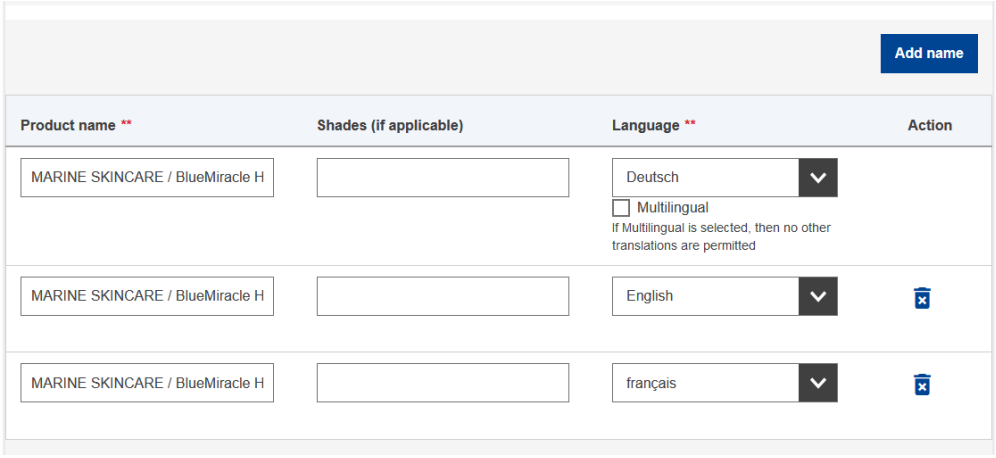

When the product is made available on the market with a name translated in different languages, each of these names must be mentioned in the notification together with the corresponding language (selected *via* the selection box).

Click Add name to add product name translation(s) in the corresponding language(s).

Disclaimer: The product illustrated here is not a real product; the name and all its markings have been invented for the sole purpose of clarification.

For example:

Should you need to delete a product name translation, just click next to the corresponding language.

If the product name is the same in all languages, you can indicate this name just once, and then select 'Multilingual' in the selection box. Please note, however, that 'Multilingual' cannot be used if the product name is the same in some languages only, but different in others. In this case, all linguistic versions of the product name must be entered individually in the system, even if identical in some languages.

▶ Is the product specifically intended for children under 3 years of age?

Please select **Yes** or **No** to specify here whether the product is specifically intended for children under 3 years of age.

▶ Responsible person

The notification shall contain at least the name and the address of the Responsible Person. This information appears on the screen under 'Responsible person' and is automatically retrieved from SAAS (p. 7) based on the user's login.

When the Responsible Person needs to update or correct its details, this has to be done in SAAS. Access to SAAS is available from the 'profile' item located at the top right of the CPNP screen. Only Local Administrators (p. 6) can modify the Responsible Person details. Never change the name or country in SAAS; this would lead to the creation of a new Organization for which products would need to be notified again!!

▶ Contact person

For each notification, the Responsible Person has to indicate the contact details of a contact person i.e., a physical person to contact in case of necessity.

Pull down the selection box for a list of all the contact persons currently linked to the Responsible Person, and then select the desired contact person.

If the desired contact person does not appear in the selection list, you can add it. The person will then become available for linking to this notification and to future notifications.

To do so:

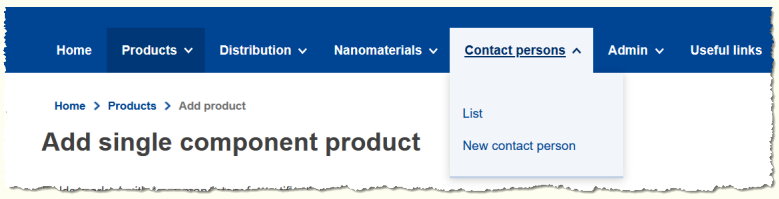

1. Click the **Add new contact** person button.
2. Enter the contact person's details on the **Add contact person** page i.e., first and last name, telephone, postal address, email address, etc.
   (Please note that all mandatory fields are indicated by a *).
3. Click **Save** at the bottom of the page to add the new contact person to the notification.

The new contact person is automatically selected for this notification. And an e-mail is simultaneously sent to him/her, with information on data protection.

Telephone and fax numbers in CPNP need to include the international country calling code.

For example: +32 2 296 93 62.

Please note that contact persons are further managed in the dedicated Contact persons menu (available for Responsible Persons only):

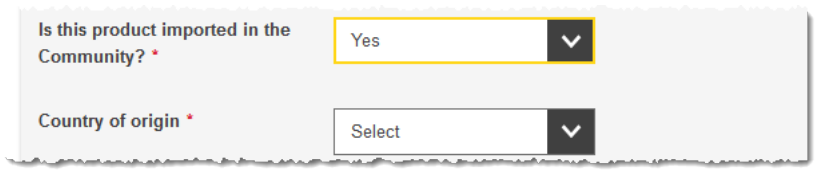

Every contact person that you create / modify on a notification is immediately added to / modified in the Contact persons modules, and vice versa. For details, please refer to Managing Contact Persons (p. 56).

▶Product no longer manufactured

Check this box if the product is no longer manufactured.

▶Is this product imported in the Community?

Select the appropriate option button to indicate whether the product is imported in the European Community. If you select **Yes**, an additional selection box will then appear to select the country of origin:

Please note that there may be rare cases where the same product is imported from several countries. In such cases, please make one notification per country of origin and mention the country of origin into brackets in the product name.

Examples:

– Repair & Shine smoothing cream (United States)

– Repair & Shine smoothing cream (China)

There may also be rare cases where the same product is both imported and not imported. In such cases, please make 2 different notifications i.e., one notification for the imported version of the product (specifying the country of origin into brackets in the product name) and another notification for the non-imported version of the product.

▶ End date of responsibility of the responsible person

If the Responsible Person was designated as such for a delimited period of time only, click in this box to select the end date of responsibility.

▶ Country first placed on the market

Pull down the selection box to select the Member State of first placing on the market.

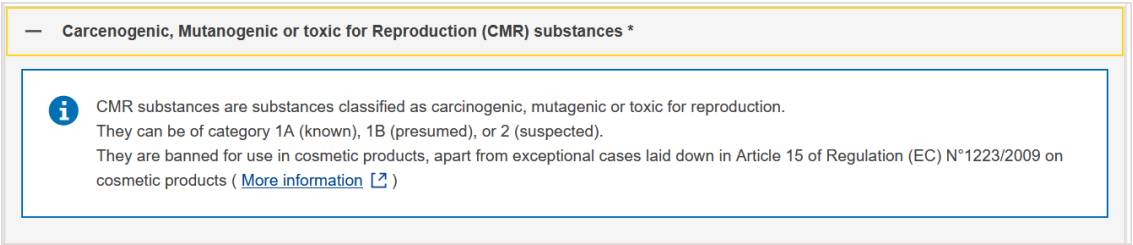

'Product details' tab

The *Product details* tab contains 4 different sections:

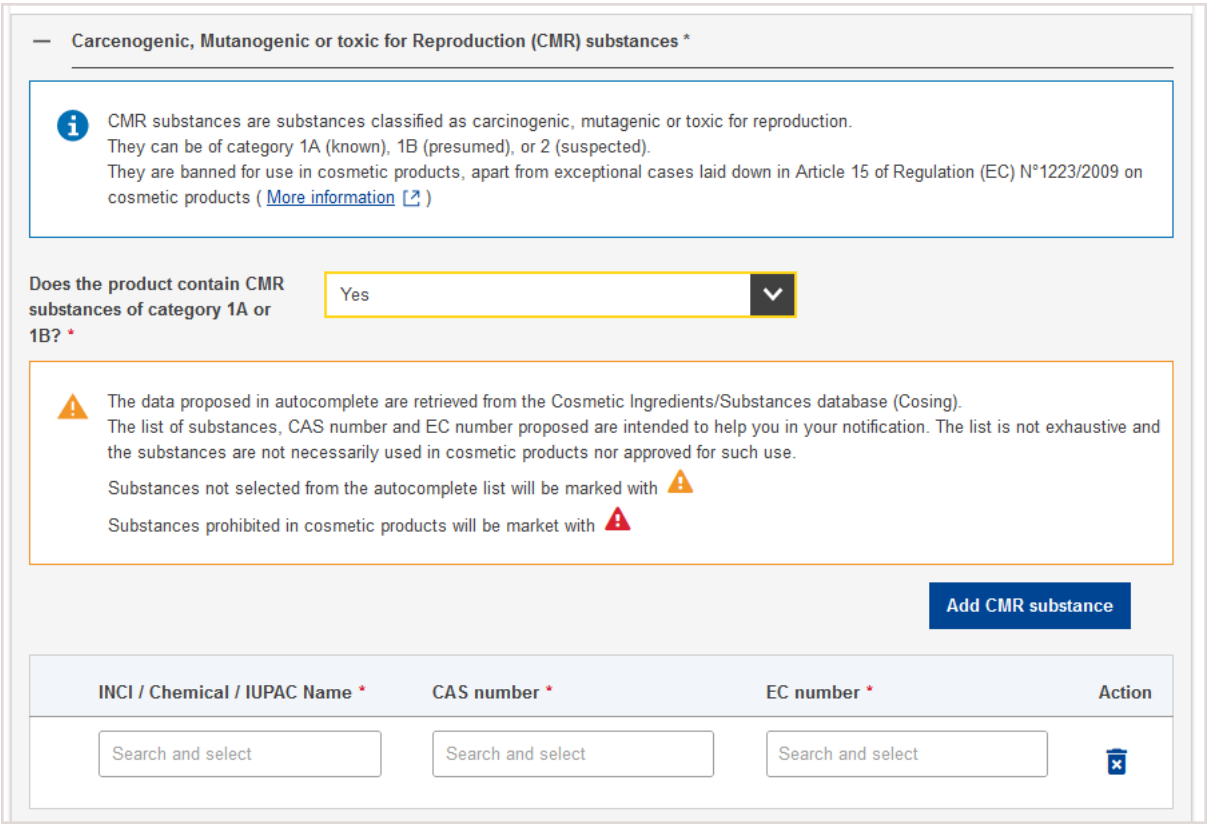

1. Carcinogenic, Mutagenic or toxic for Reproduction (CMR) substances (p. 21)
2. Nanomaterials (p. 22)
3. Category & Frame formulation (p. 27)
4. Original labelling & original packaging (p. 36)

1. Carcinogenic, Mutagenic or toxic for Reproduction (CMR) substances

Use this section to specify whether the product contains substances classified as carcinogenic, mutagenic or toxic for reproduction (CMR), of category 1A or 1B, under Part 3 of Annex VI to Regulation (EC) No 1272/2008.

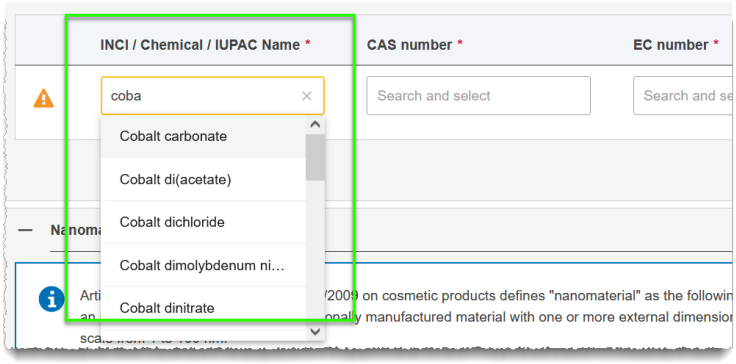

If the product does contain such substances, and you answered **Yes** to the question, you will then be prompted to identify each of these based on their INCI/Chemical/IUPAC, CAS or EC Number:

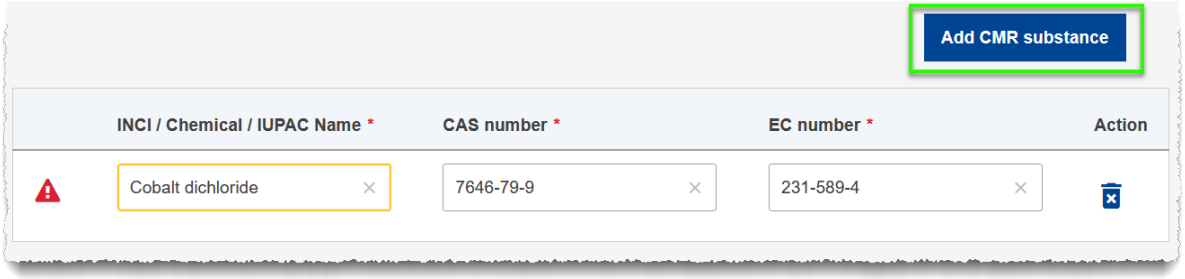

Proceed as follows:

1. Type the first characters or digits of the searched INCI/Chemical/IUPAC, CAS or EC Number in the related input box.
2. Select the appropriate substance in the list of matching substances:

3. To add more substances, click the **Add CMR Substance** button and proceed likewise.

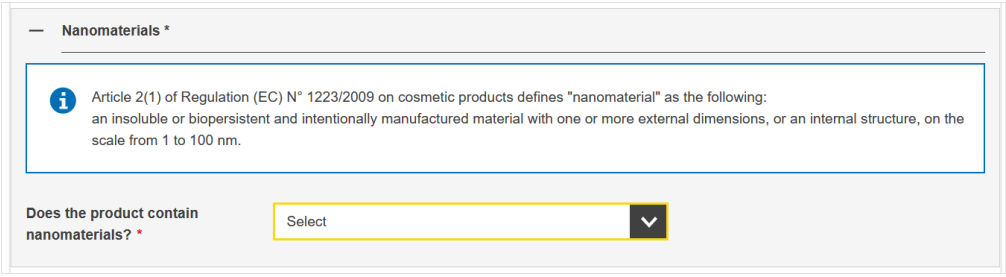

Please note that the list of ingredients cannot be filtered to include only CMRs 1A or 1B. And it may include ingredients which are not intended for use in cosmetic products! A ⚠ will show in front of substances which are identified as prohibited in cosmetic products from Annex II of the Regulation (EC) No 1223/2009 as amended.

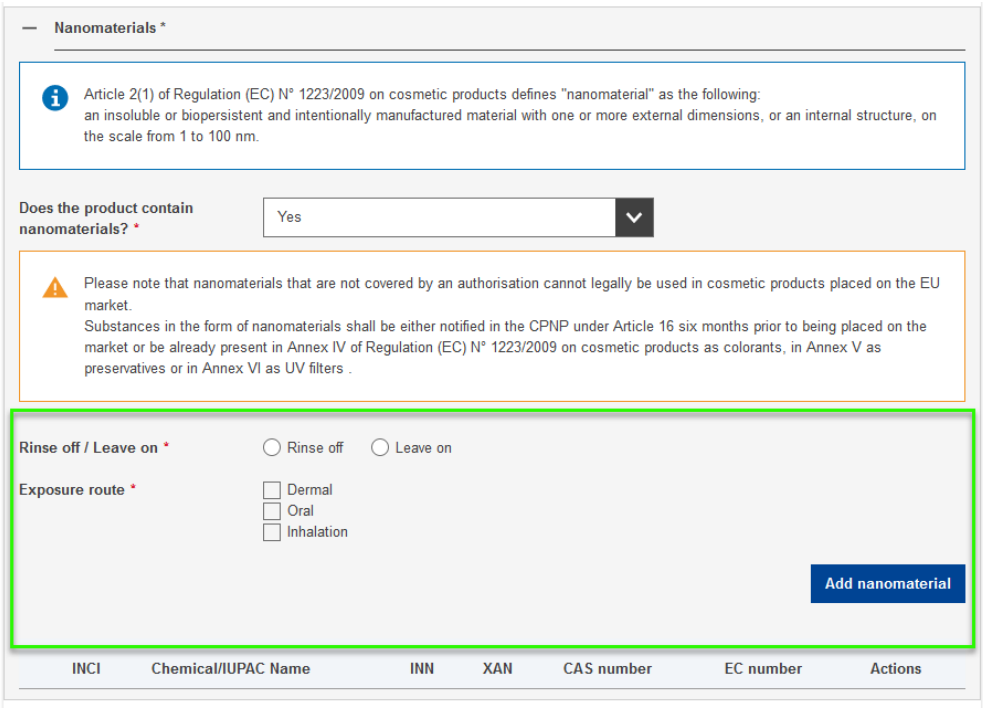

You remain responsible for checking the completeness and the exactness of the information provided, and for updating it where necessary.

2. Nanomaterials

Use this section to specify whether the product contains substances classified as nanomaterials under Article 2(1) of Regulation (EC) No 1223/2009.

If you answer **Yes** to this question, the following additional option group will appear:

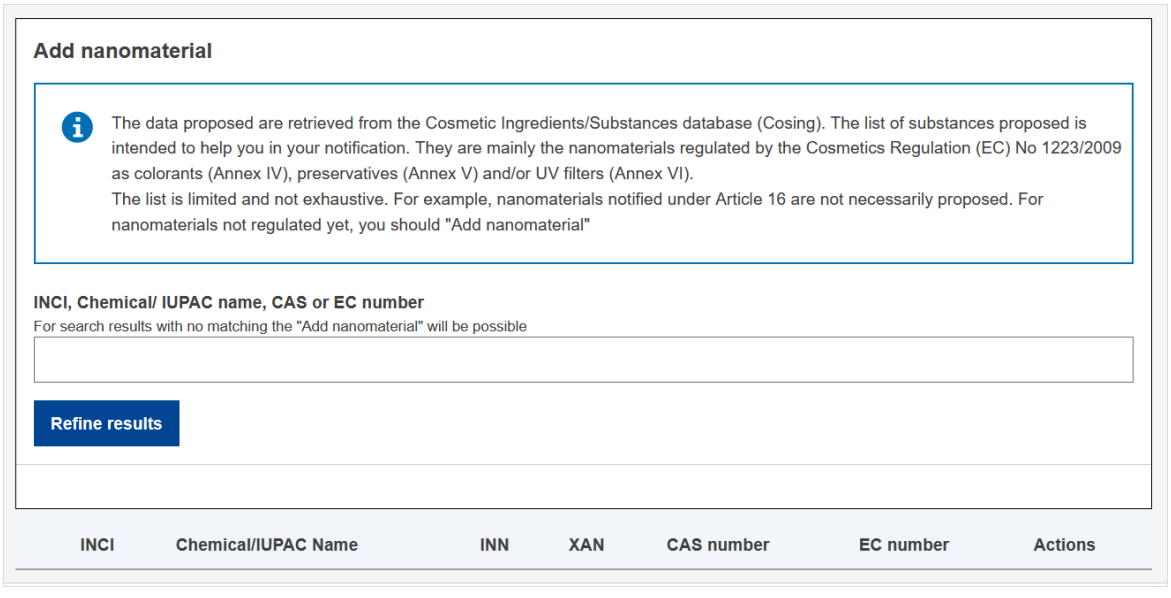

CPNP will first ask you to answer 2 questions on the exposure conditions:

- Is the product a rinse-off or a leave-on product?
  'Rinse-off product' means a cosmetic product which is intended to be removed after application on the skin, the hair or the mucous membranes; 'Leave-on product' means a cosmetic product which is intended to stay in prolonged contact with the skin, the hair or the mucous membranes.
- What is the exposure route (dermal, oral and/or inhalation)?

To add a nanomaterial to the notification

1. Click **Add nanomaterial**

   An additional section will let you search for the nanomaterial in "CosIng (Cosmetic Ingredients Database)":

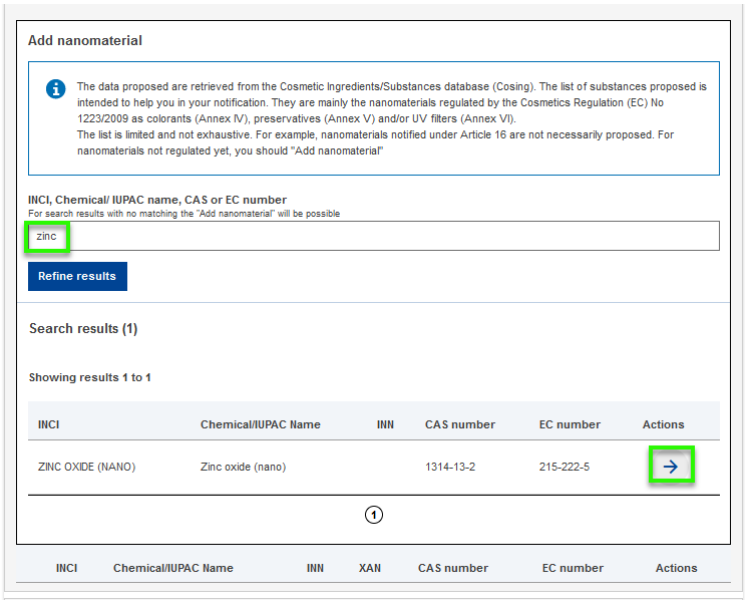

2. To help you enter this information, the INCI, IUPAC, INN, CAS or EC Number can be retrieved from CosIng, when available.

   To do so:

   – Type at least the first 2 characters or digits of the searched INCI, IUPAC, INN, CAS or EC Number in the input box and click the **Refine results** button. All matching items will show from CosIng,

> Please note that nanomaterials from CosIng may include ingredients which are not intended for use in cosmetic products! You remain responsible for checking the completeness and exactness of the information provided, and for adjusting as necessary. The CosIng search feature includes nanomaterials and nanomaterials under Article 16 of the Cosmetics Regulation (EC) No 1223/2009.

   – Click the → next to the desired item in the search results table:

   – Check the information about the selected item and then click **Add**:

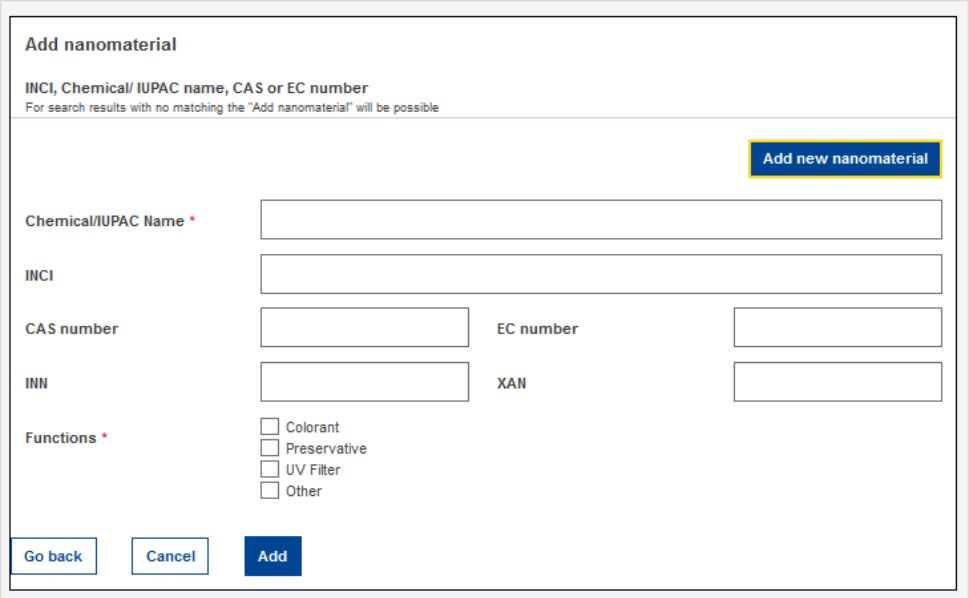

Please note that at least one function is mandatory; an additional section will show if you add some functions (e.g. 'Preservative'):

Or,

If the searched nanomaterial is not found, you can add it using the **Add new nanomaterial** button at the bottom right of the search section:

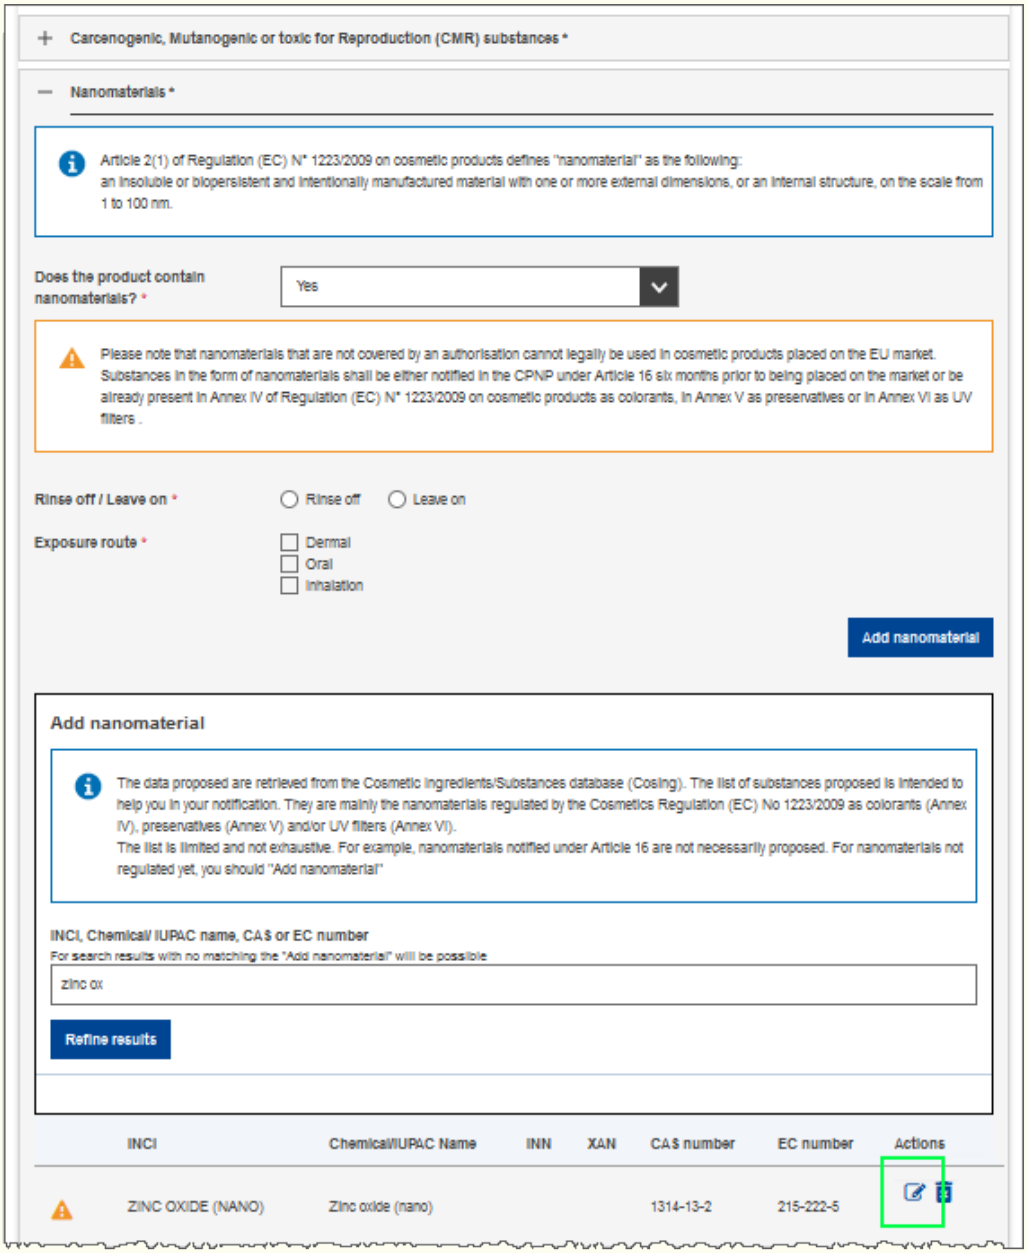

You will then be able to enter all details of the nanomaterial on a new section of the page:

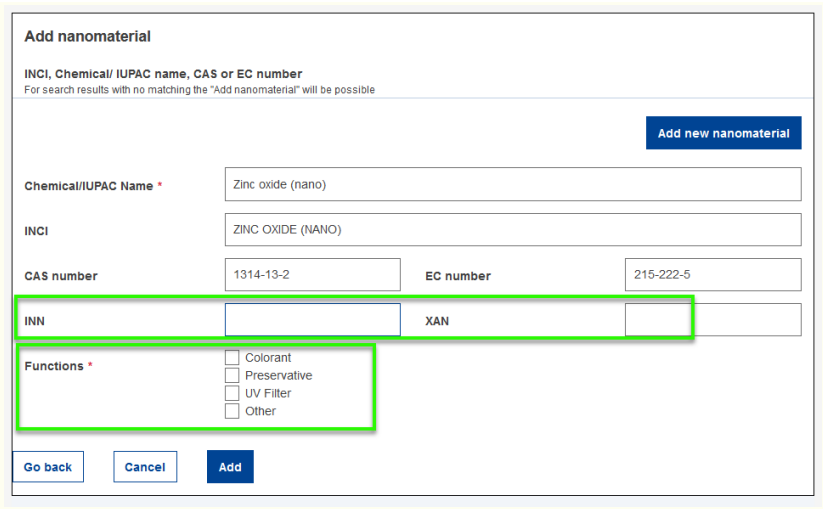

EDITING NANOMATERIALS

Please note that you can edit old or newly created nanomaterials using the icon next to a selected nanomaterial:

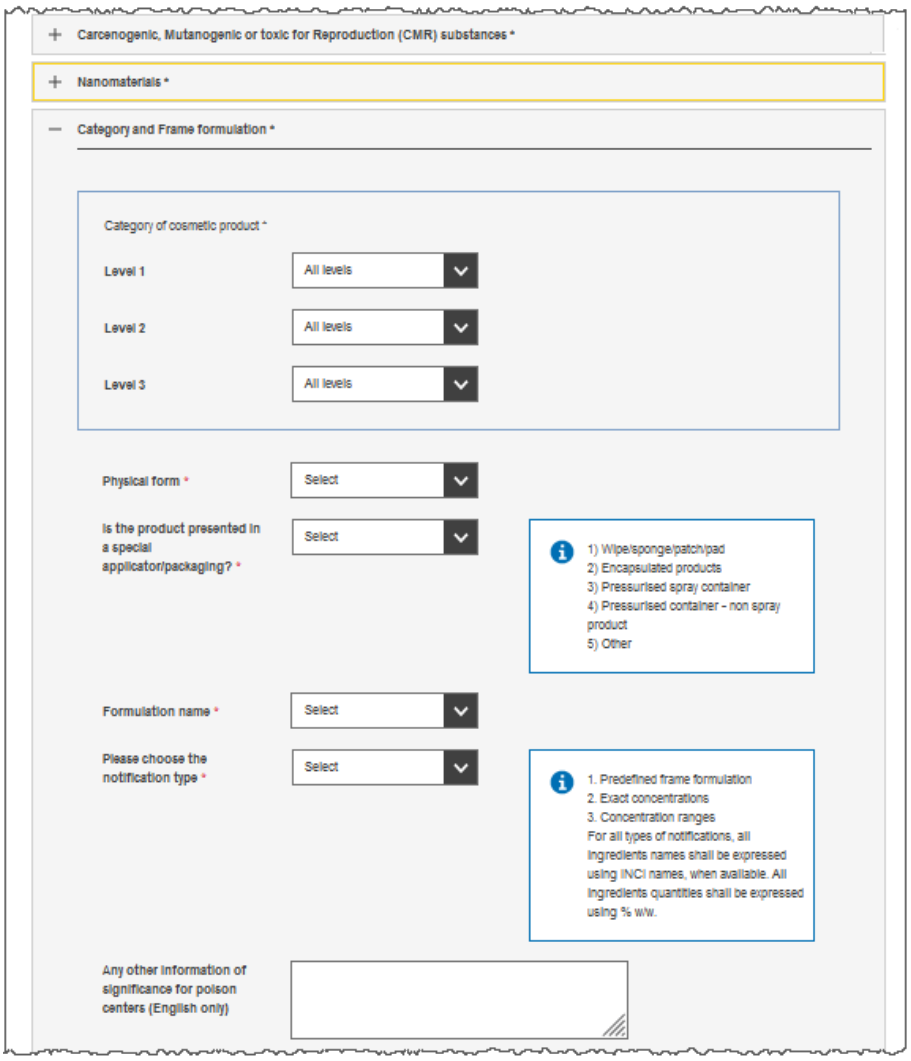

Please note, however, that only empty boxes and Functions can be edited:

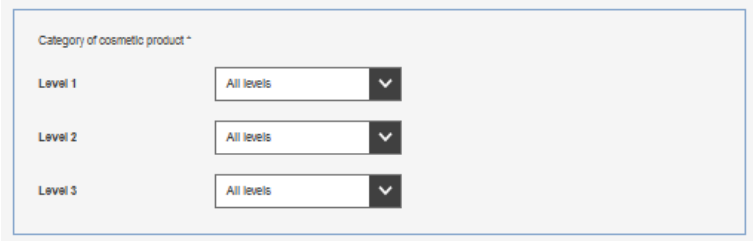

3. Category & Frame formulation

The *Category & Frame formulation* accordion is used to enter the following information:

▶ Category of cosmetic product

You have to select here 3 category levels, starting with the Level 1 category, and then the subsequent Levels 2 and 3:

In some rare cases, products may have several 'functions' that may make them fall under different categories. In these cases, it is the primary function that must be considered for the categorisation of the cosmetic product.

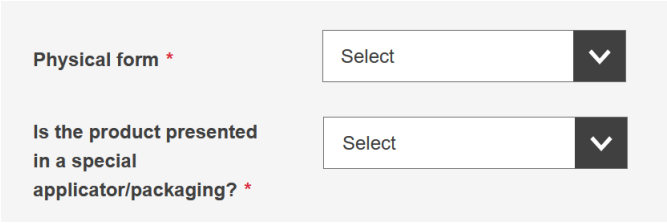

The choice of a category at Level 1 determines the categories available at Level 2; the choice of a category at Level 2 will determine the categories available at Level 3.

All existing categories are available from the Useful links page of CPNP.

▶ Physical form

Pull down the selection box to select the physical form of the product.

'Liquid' includes formulations (e.g., solution or milks) with low viscosity, typically below 10.000 cp.

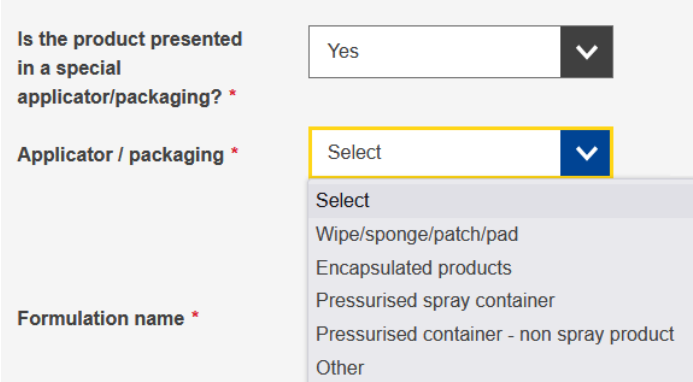

▶ Is the product presented in a special applicator/packaging?

Select **Yes** or **No** to indicate whether the product is presented in a typical non-pressurised cosmetic packaging (*e.g.* bottle, jar, or sachet) or rather in a special applicator or packaging. This information might allow Poison Centres to modulate their risk assessment in case of emergency medical treatment.

You can view the possible choices in terms of special applicators and packaging in the ℹ info box.

If you answer **Yes**, select the appropriate applicator/packaging from the selection list:

If you select **Other** in the selection list, you will be invited to suggest an applicator / packaging denomination (preferably in English). All applicator / packaging suggested names will be taken into consideration by the CPNP maintenance group to create new applicator/packaging names, or update the existing ones, where necessary:

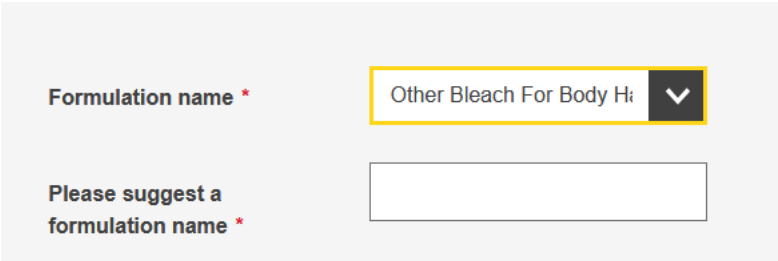

▶ Formulation name

Please note that the **Formulation name** selection box is enabled only after you select category levels in the **Category of cosmetic product** section above. Depending on the levels selected, you will be offered a corresponding list of possible formulation names for selection. Pull down the selection box and select the appropriate formulation name. The formulation name provides a more detailed product categorisation, which is made available to poison centres only.

Choosing a formulation name does not mean that you will be notifying this product using a predefined frame formulation. After having selected a formulation name you will still have the choice to notify using a predefined frame formulation, an exact concentration declaration or a concentration ranges declaration.

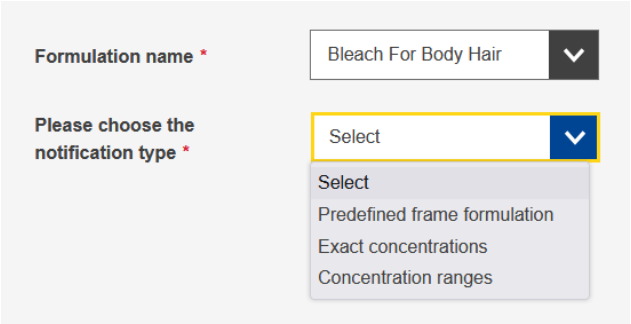

If you select **Other**, you will be invited to suggest a formulation name (preferably in English). All suggested names will be taken into consideration by the CPNP maintenance group in order to create new formulation names, or update those existing, where necessary.

Shouldn't you have any suggestion for any formulation name, you can then simply repeat the name selected for the Level 3 category.

▶ Please choose the notification type

In the majority of the cases, the selection box will offer 3 options, *i.e.,* **Predefined frame formulation**, **Exact concentrations** or **Concentration ranges**.

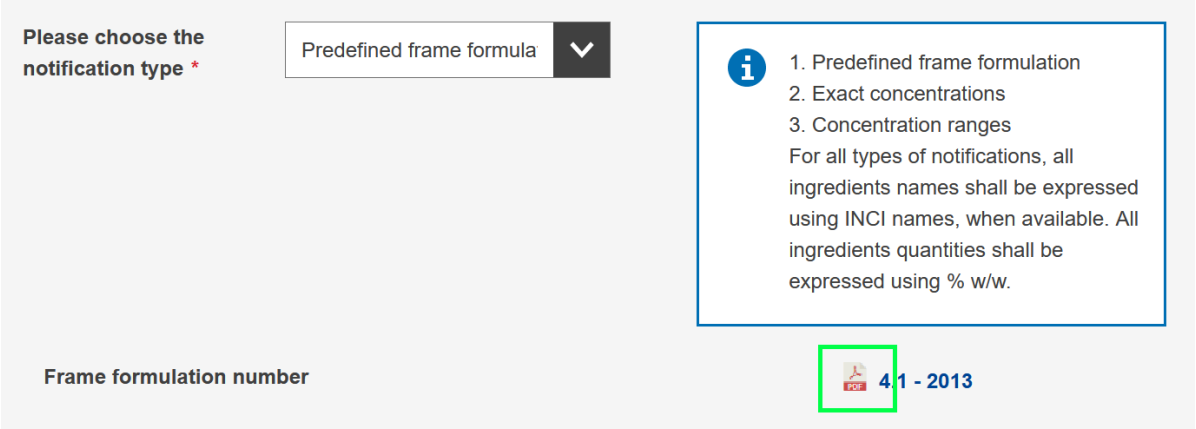

In some cases, depending on the categories of cosmetic products selected, there may be no existing predefined frame formulation. In such cases, only two options will be available *i.e.*, 'Exact concentrations' or 'Concentration ranges'.

▶ Predefined frame formulation

A set of predefined frame formulations have been elaborated by an expert group composed of representatives from Poison Centres, Competent Authorities, industry trade associations and Commission' services. These are available for consultation in a separate document.

If you select **Predefined frame formulation** in the '*Please choose the notification type*' selection list, then CPNP will automatically suggest the corresponding predefined frame formulation on the basis of the category and formulation name that you selected. This predefined frame formulation will be linked to the notification as a PDF document. Please check the relevance of the selected predefined frame formulation for the product being notified by clicking the little icon:

– The term '*additional ingredient*' used in some predefined frame formulations does not relieve of the obligation to report substances falling under any of the rules set out in the Appendix (p. 72) of this User Manual with their exact concentration. Furthermore, it cannot cover any ingredient that would contribute in a significant way to the toxicity profile of the cosmetic product.

– A notification via *predefined frame formulation* can be done *only if the composition of the cosmetic product completely falls within the concentration ranges mentioned in this frame formulation*. In particular, if any ingredient concentration is higher than the maximum levels indicated in the predefined frame formulation, or if any ingredient is not covered by the predefined frame formulation content, this predefined frame formulation must not be used for the notification.

Depending on the product categories, the physical form and the formulation name selected, additional information will be asked by CPNP on specific ingredients of concern and/or the pH value of the product.

The rules that CPNP applies have been elaborated by an expert group composed of representatives from poison centres, competent authorities, industry trade associations and Commission' services and are available for consultation in the Appendix (p. 72) of this User Manual. The links between the categories of cosmetic products and the rules triggered by CPNP are available from the Useful links page of CPNP.

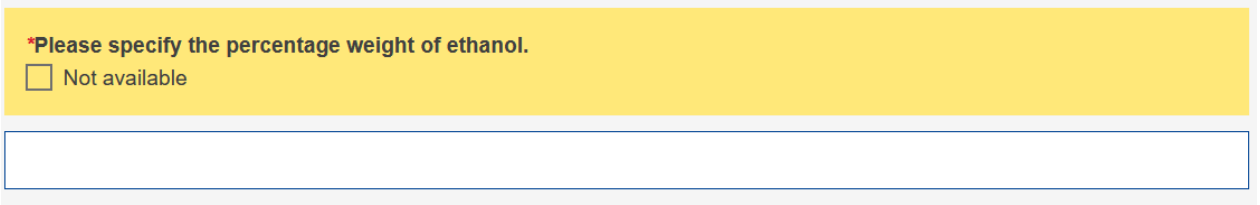

The following first question will be asked:

Please carefully go through the whole list of ingredients by clicking on each of the **+** to expand each section.

Either select **Yes, see below,** check the box of the relevant ingredient(s) and indicate its (their) concentration(s) in the product, or select **No** as appropriate.

For the other questions, you will usually have the choice between answering the question in the dedicated field(s) or selecting the **Not available** check box:

To facilitate the entry of names of ingredients, a link is made to **CosIng** to retrieve the information. You can also enter an ingredient name if the appropriate one is not included in CosIng.

In the case of **ethanol and/or isopropanol**, '*Not available*' means that these ingredients are *not present in the product*!

In the case of **all other ingredients of concern**, it means that the ingredient is either not present in the product, or is present in the product but under the concentration of concern according to the rules set out in the Appendix (p. 72) of this User Manual. All ingredient names shall be expressed using INCI names, when available.

Where the information on pH is required and the pH could not be measured in the product directly, but through an aqueous solution, extract or dispersion (e.g. for solid formulations), you should mention this in the '*Any other information of significance for poison centres*' field, using the following expression in English only i.e. '**pH (aqueous extract/solution/dispersion)**'.

All ingredient quantities shall be expressed using **% w/w**. The symbol % w/w shal NOT be indicated in the answering field.

Please use the *English* notation for numbers, for example: 0.3, and NOT 0,3.

For **ethanol and/or isopropanol**, an *updated notification is required* when the *content of either ingredient or the sum of both ingredients changes by more than 5*, if the value declared previously is <30%, *or by more than 10*, if the value declared previously is ≥ 30%

For **all other ingredients of concern**, an updated notification is required when the concentration of the ingredient changes by more than 20% of the value previously declared (see Appendix (p. 72) of this User Manual for further details).

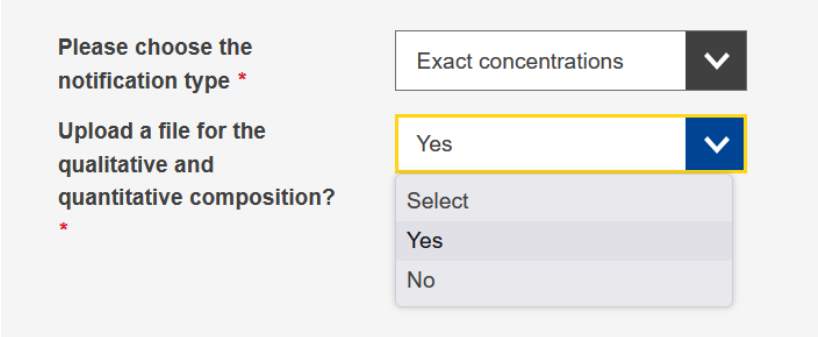

An *updated* notification is also required when the product does not fall anymore in the predefined frame formulation, when a new ingredient of concern enters in the composition of the product or when an ingredient of concern no longer enters the composition of the product.

In the lower text box, please also mention any other information on the product that would be of significance for Poison Centres (using English only). Such additional information refers in particular to additional information to identify the product or assess its risk in a poisoning scenario (e.g. colour, taste, smell, other information to help poison centres in the assessment of a case):

Any other information of significance for poison centers (English only)

▶ Exact concentrations

If you select **Exact concentrations** in the 'Please choose the notification type' selection box, you will be asked whether you want to upload a file for the qualitative and quantitative composition:

- If you answer **Yes**, you will be asked to attach the corresponding file. Please note that only PDFs are allowed.

No hand-written documents are allowed. Only clear and legible electronic PDF text format documents are allowed.

In order to facilitate poison centres reading in emergency situations, it is recommended that the exact concentration document starts by mentioning the *ingredients of concerns and their concentration* (according to the rules set out in the Appendix (p. 72) of this User Manual and then lists all other ingredients by decreasing order of their concentration in the product.

All ingredient names shall be expressed using **INCI names**, when available.

All ingredient quantities shall be expressed using **% w/w.**

Please use the **English notation for numbers**. For example: 0.3, and NOT 0,3.

Where the information on pH is required and the pH could not be measured in the product directly, but through an aqueous solution, extract or dispersion (e.g. for solid formulations), you should mention this in the '*Any other information of significance for Poison Centres*' field using the following expression in English only i.e. **pH (aqueous extract/solution/dispersion)**'.

For ethanol and/or isopropanol, an updated notification is required when the content of either ingredient or the sum of both ingredients changes by more than 5, if the value declared previously is <30%, or by more than 10, if the value declared previously is ≥ 30%.

For the other ingredients, an updated notification is required when the concentration of an ingredient changes by more than 20% of the value declared previously, **when a new ingredient enters in the composition of the product or when an ingredient no longer enters the composition of the product**.

- If you answer **No**, you have to enter the ingredients one by one.
  To facilitate the entry of names of ingredients, a link is made to CosIng to retrieve the information. You can also enter an ingredient if its name is not included in CosIng. Here too, it is recommended that you start by mentioning the ingredients of concern, and their concentration (according to the rules set out in the Appendix (p. 72) of this User Manual) and then lists all other ingredients by decreasing order of concentration in the product.

All ingredient names shall be expressed using **INCI names**, when available.

All ingredient quantities shall be expressed using **% w/w**.

The symbol **% w/w shall NOT be indicated** in the answering field.

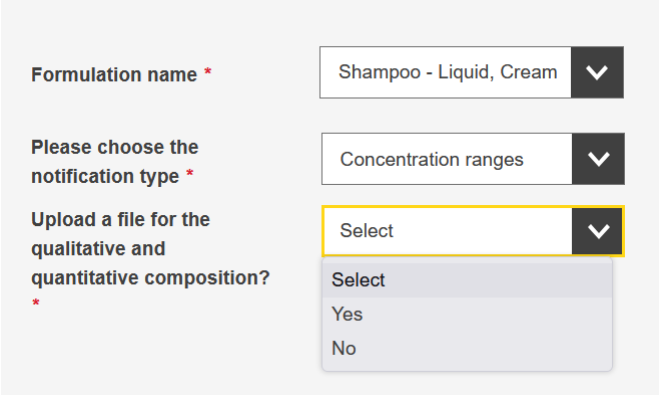

Please use the **English notation for numbers**. For example: 0.3, and NOT 0,3.

In the lower text box, please also mention any other information on the product that would be of significance for Poison Centres (using English only). Such additional information refers in particular to additional information to identify the product or assess its risk in a poisoning scenario (e.g. colour, taste, smell, other information to help poison centres in the assessment of a case):

▶ Concentration ranges

If you select **Concentration ranges** in the '*Please choose the notification type*' selection box, you will be asked whether you want to upload a file for the qualitative and quantitative composition.

- If you answer **Yes**, you will be asked to attach the corresponding file. Please note that only PDFs are allowed.

No hand-written documents are allowed. Only clear and legible electronic PDF text format documents are allowed. For ingredients that are not of special concern, only the following concentration ranges are allowed:

≤0.1%	>10% - ≤25%
>0.1% - ≤1%	>10% - ≤25%
>1% - ≤5%	>50% - ≤75%
>5% - ≤10%	>75% - ≤100%

In order to facilitate poison centres reading in emergency situations, it is recommended that the exact concentration document *starts by mentioning the ingredients of concerns and their concentration* (according to the rules set out in the Appendix (p. 72) of this User Manual) *and then lists all other ingredients by decreasing order of their concentration in the product*.

Where the information on pH is required and the pH could not be measured in the product directly, but through an aqueous solution, extract or dispersion (e.g. for solid formulations), the user should mention this in the field dedicated to '*Any other information of significance for Poison Centres*' using the expression '**pH (aqueous extract/solution/dispersion)**' in English only.

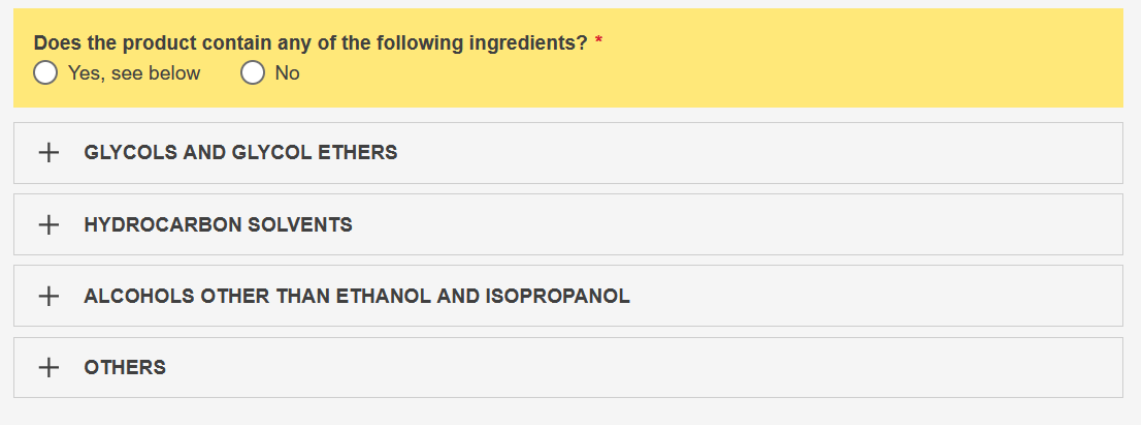

For ethanol and/or isopropanol, an *updated* notification is required when the content of either ingredient or the sum of both ingredients changes by more than 5, if the value declared previously is <30%, or by more than 10, if the value declared previously is ≥30%.

For all other ingredients of concern, an *updated* notification is required when the concentration of an ingredient changes by more than 20% of the value previously declared (see the Appendix (p. 72) of this User Manual for further details).

An *updated* notification is also required when an ingredient falls in a concentration range different from the one previously declared, **when a new ingredient of concern enters in the composition of the product or when an ingredient of concern no longer enters the composition of the product**.

As for predefined frame formulations, depending on the product categories, the physical form and the formulation name selected, additional information will be asked by CPNP on specific ingredients of concern and/or the pH value of the product. The rules that CPNP applies have been elaborated by an expert group composed of representatives from poison centres, competent authorities, industry trade associations and Commission' services and are available for consultation in the Appendix (p. 72) of this User Manual. The links between the categories of cosmetic products and the rules triggered by CPNP are available from the *Useful links* page of CPNP.

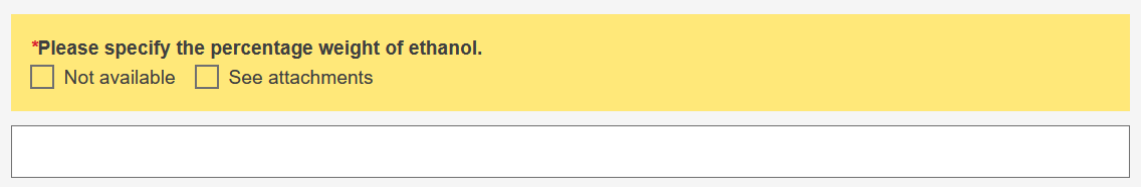

The following first question will be asked:

Please carefully go through the whole list of ingredients by clicking on each of **+**.

Either select **Yes, see below,** check the box of the relevant ingredient(s) and indicate its (their) concentration(s) in the product, or select **No** as appropriate.

For the other questions, you will usually have the choice between answering the question in the dedicated field(s) or selecting the **Not available** or **See attachments** check box(es):

In the case of **ethanol and/or isopropanol**, '*Not available*' means that these ingredients are not present in the product!

In the case of **all other ingredients of concern**, it means that the ingredient is either *not present in the product*, or is *present in the product but under the concentration of concern* (according to the rules set out in the Appendix (p. 72) of this User Manual).

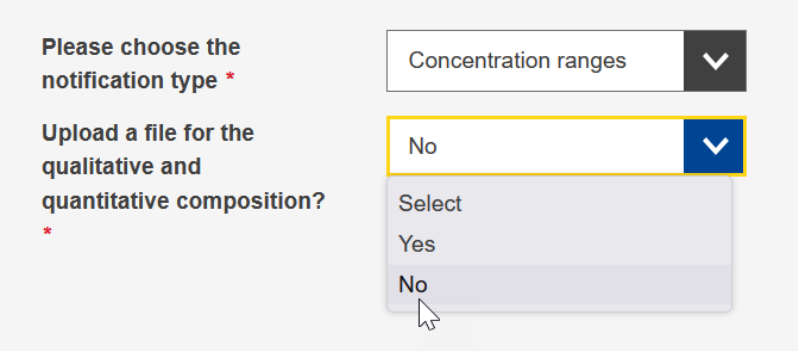

'`See attachment`' can be used to answer a specific question only when the information requested on the ingredient of concern is provided in the qualitative and quantitative composition document attached.

All ingredient names shall be expressed using **INCI names**, when available.

The quantities of all ingredient of concern shall be expressed using `% w/w`. The symbol % w/w shall NOT be indicated in the answering field.

Please use the **English notation for numbers** e.g., 0.3 and NOT 0,3.

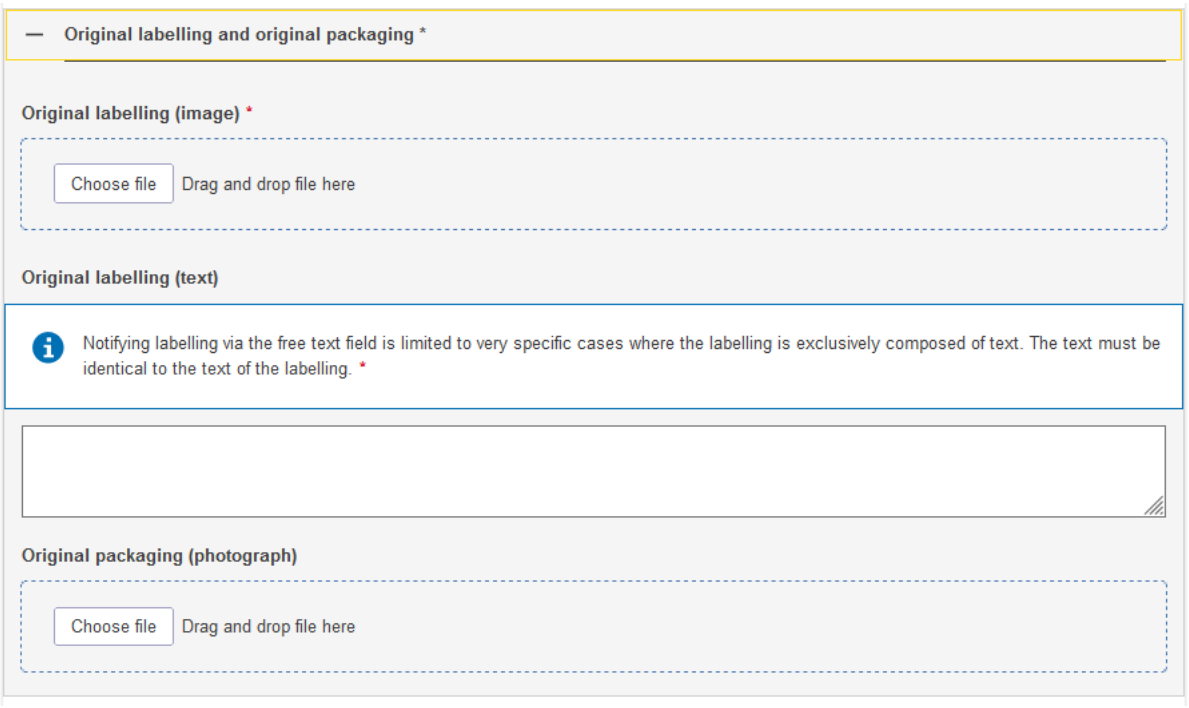

- If you answer **No**, you will be asked to enter the ingredients and the corresponding concentration ranges one by one by decreasing order of concentration in the product. To facilitate the entry of names of ingredients, a link is made to **CosIng** to retrieve the information. You can also enter an ingredient if the name is not included in CosIng:

In the lower text box, please also mention any other information on the product that would be of significance for Poison Centres (using English only). Such additional information refers in particular to additional information to identify the product or assess its risk in a poisoning scenario (e.g. colour, taste, smell, other information to help poison centres in the assessment of a case).

4. Original labelling & original packaging

Use this section to attach the **original labelling** and a **photograph** of the original packaging (where reasonably legible).

Only PDF, JPG or JPEG format are accepted.

Please note that 'Original' means the one corresponding to the first placing on the market in the EU.

The submission of the original labelling and of a photograph of the original packaging (where reasonably legible) is mandatory at the latest when the product is placed on the market.

Various situations may occur:

Example 1:

A single component product without any secondary packaging (e.g. a standalone bottle of shampoo)

→ The original labelling of the bottle and, if reasonably legible, the photograph of the bottle shall be submitted.

Example 2:

A single component product with a secondary packaging (e.g. a bottle of shampoo in a box)

→ The original labelling of the box (outer packaging) and, if reasonably legible, the photograph of the box shall be submitted.

→ Optionally, the original labelling and the photograph of the bottle can also be submitted.

Example 3:

A multi-component product (e.g. a set composed of three bottles)

→ The original labelling of the set and, if reasonably legible, the photograph of the set shall be submitted.

→ Optionally, the original labelling of each bottle and the photograph of each bottle can also be added to the notification at the component level.

The labelling shall include any text, symbols, pictures etc. (*e.g.,* art work). It shall cover notably all the mandatory elements mentioned in Article 19 of Regulation (EC) N°1223/2009. In cases where, in accordance with Article 19(2), some mandatory information is mentioned on an enclosed or attached leaflet, label, tag or card, this leaflet, label, tag or card shall also be included in the notification.

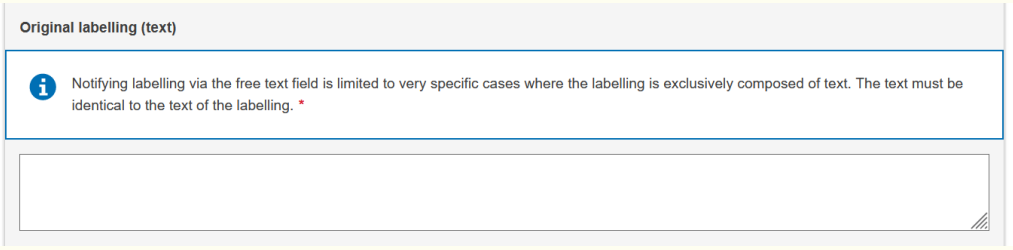

If the notification covers several pack sizes or shades, the most legible original labelling & original packaging are to be attached to the notification, usually the biggest pack size.

To add an image of the original labelling or a photograph of the original packaging:

1. Click Choose file or use the **Drag and drop file here** option.
2. Select the image in the File Explorer window.

The **size** of all attached documents (labelling, photograph of the packaging, composition document) cannot exceed 2MB.

The labelling can also be submitted by using the lower, '*Original labelling (text)*', free text box. This is however limited to the very specific cases where the labelling is exclusively composed of text.

3.1.1.2. Notifying a multi-component Product

A multi-component product is a collection of components sold as a set and intended to be used as a mix or sequentially (e.g. hair colouring kit, skin peeling kit, permanent styling product, etc.).

The way to notify products consisting of several components (e.g. hair dye sets, make-up sets) that are not marketed separately differs from the way single component products are notified.

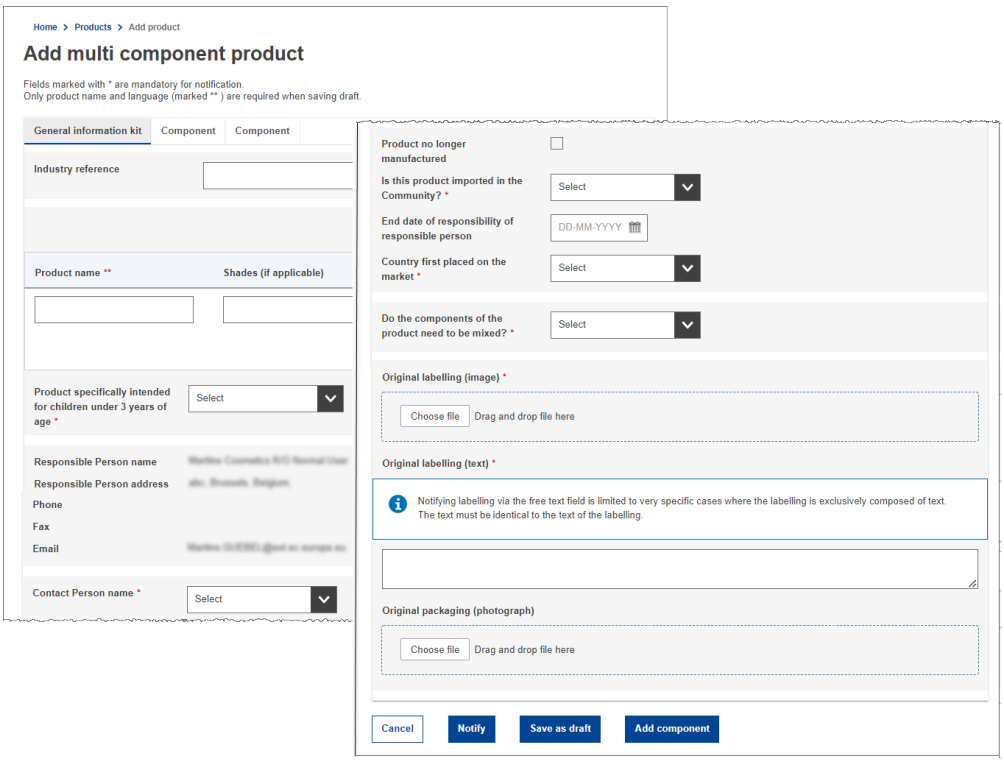

Whether a product is a single or multi-component product has nothing to do with the fact that the product has several ingredients/substances in its composition! Note as well that *sets* do not need to be notified as multi-component products if all their components have been notified individually.

A multi-component notification page has 3 tabs i.e., 1 **General information kit** tab and 2 **Component** tabs:

'General information kit' tab

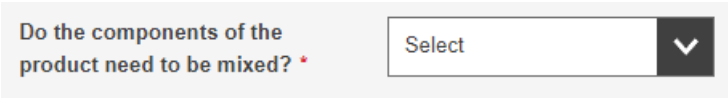

The **General information kit** tab allows the Responsible Person to enter some general information about the product (*e.g.* kit, set, etc.).

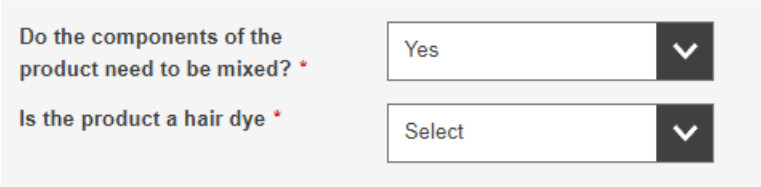

Except for the group of questions in the block starting with **Do the components of the product need to be mixed?** (see below) and for additional fields about the original labelling and packaging of the product, the information to be entered in the **General information kit** tab is identical to the information requested in the **General information** tab of a single component product. So, for a description of the common fields, please refer to Notifying a Single Component Product (p. 16)).

The additional, multi-component product-specific questions are grouped in the block starting with **Do the components of the product need to be mixed?**

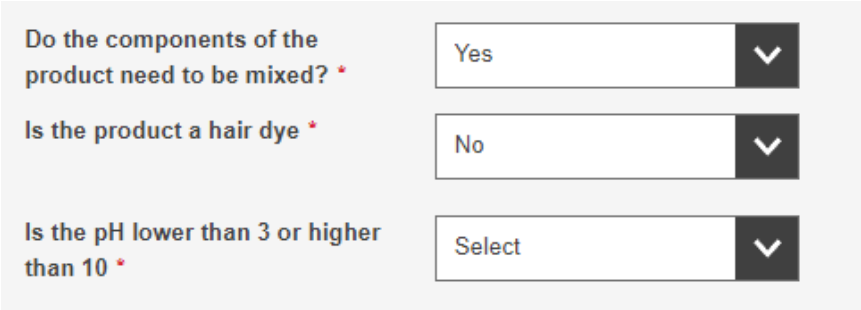

The first question is this:

If you answer **Yes** to this question, you will be asked whether the product is a hair dye:

If you answer **No** to the question about hair dye, you will be asked whether the pH is lower than 3 or higher than 10:

If you answer **Yes** to the question about the pH, you will be prompted to specify the pH range. The pH range cannot exceed 1 pH unit.

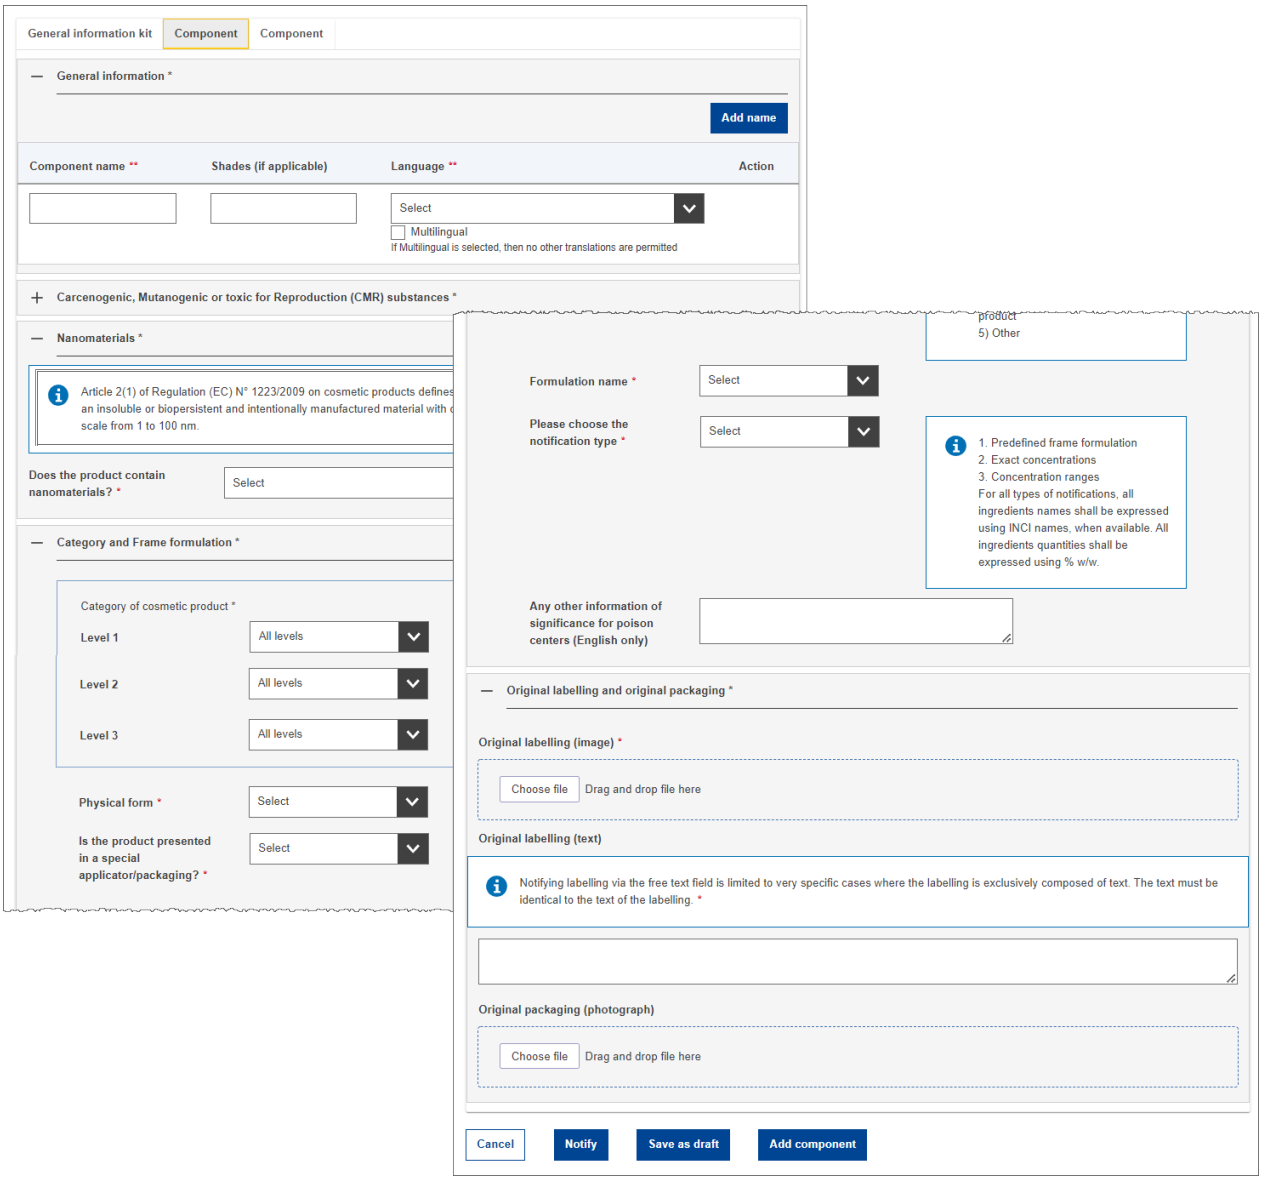

If you indicate that the product is a hair dye, CPNP will directly ask the pH range. The pH range cannot exceed 1 pH unit.

'Component' tabs

Use the '**Component**' tabs to provide information about each separate product component (for guidelines about completing each tab, please refer to the same information relating to single component products).

Except for the **Component name(s)** in one or more languages, the information to be entered in the **Component** tabs of a multi-component product is similar to the information requested in the **General information** tab of a single component product. So, for a description of the common fields, please refer to Notifying a Single Component Product (p. 16)).

IMPORTANT

The **component name** is a crucial element of the notification, as it might be used by competent authorities or by poison centres to search for a specific component in the database.

Example:

The Marine HAIRCARE* kit contains 3 components:

• Component 1

Name (EN): HairShock Revitalising Mousse

• Component 2

Name (EN): HairShock Restructuring Fluid

• Component 3

Name (EN): HairShock Volumising Cream

The component name must be detailed enough to enable its specific identification.

Only in cases where the component has no name (*e.g.* certain make-up set components) the component name shall be understood as the description of the component that enables its specific identification.

By default, 2 *Component* tabs are displayed, but additional ones can be added to the notification if necessary using the **Add component** button at the bottom of the page.

(*)Disclaimer: The product illustrated here is not a real product; the name and all its markings have been invented for the sole purpose of clarification.

3.1.2. Editing Products

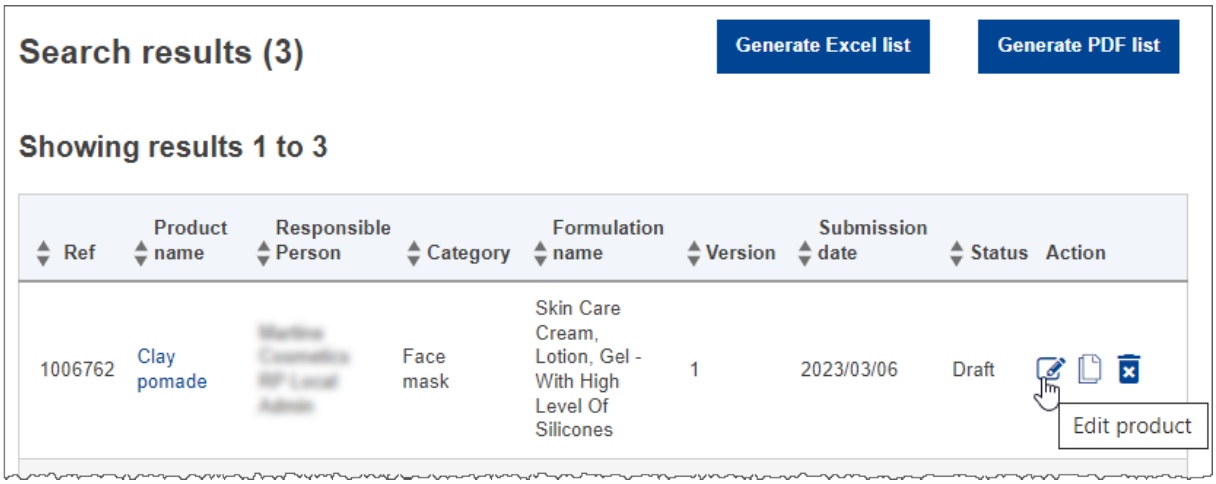

Using the **Edit product**, Responsible Person are able to edit a notification that you have previously entered in the system.

Please note that the **Edit product** option is available for Responsible Persons only. Remember that Distributors do not have the **Products** menu.

To edit a notification

1. Perform a Simple or an Advanced Search to look for the desired product (see Using The Search Tools (p. 66)).
2. Either:

   Click **Edit product** next to the desired product in the search result list:

   Or:

   Click on the desired product hyperlink in the 'Product Name' column of the search result list.

   Or:

   Click on the desired product name in the search result list, and then click Edit at the bottom of the product detail page.
3. Make the required changes and save.

Where any of the information set out in paragraphs 1, 3 and 4 of Article 13 of Regulation 1223/2009 changes, the responsible person or the distributor shall update its notification *without delay*.

Once the change(s) made, the system will ask to specify which type of modification you have made (i.e., update or correction) and which specific information was modified. And, as a Responsible Person, you can also provide further details (in English only) on the modification that you made, using the lower, free text, Comment box.

It is important to distinguish clearly between an update and a correction, particularly when it concerns the formulation.

An 'update' of the formulation means a change of previously valid information. The original dataset relates to the older product formulation, while the updated one relates to the new formulation. Poison Centres must evaluate both formulations in case they cannot reliably decide which formulation version is involved in an exposure case.

A 'correction' of the formulation means change of erroneous or incomplete product information without changing the (real world) formula. Poison Centres need only evaluate the corrected dataset.

Please note as well, that only an update (not a correction) of the formulation and/or category will create a new version of a notification. All other changes will simply result in a new timestamp of the same version of the notification.

4. Click **Save** to notify the changes in the system. They will then be made available to Competent Authorities and Poison Centres.

3.1.3. Duplicating Products

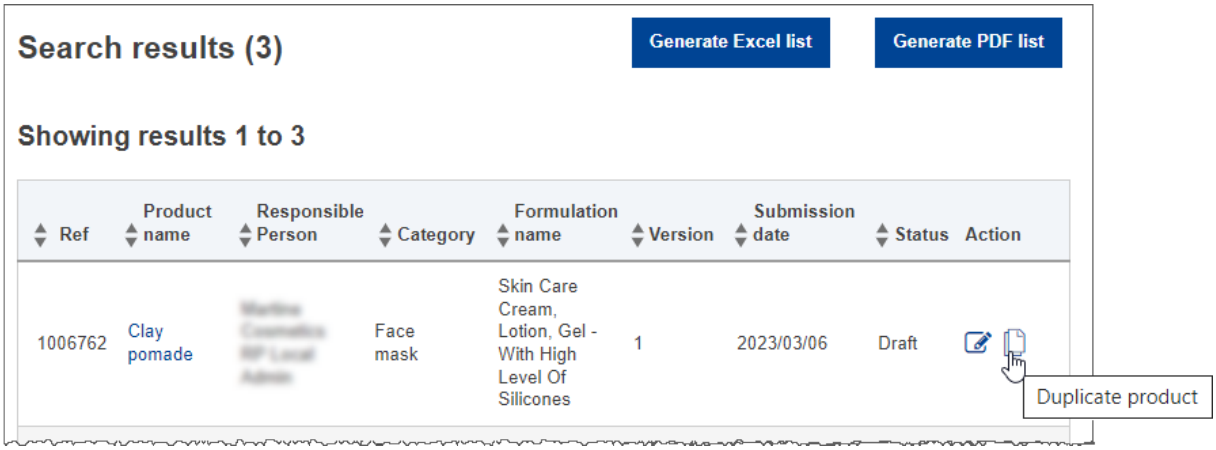

The **Duplicate product** option allows Responsible Persons only to duplicate products – whether they have already been notified or they are still in 'Draft'. This may be useful when very similar products have to be notified separately i.e., you will not have to enter the same information again.

Please note that the **Duplicate product** option is available for Responsible Persons only. Remember that Distributors do not even have the **Products** menu.

To duplicate a product

1. Perform a Simple or an Advanced Search to look for the desired notified product (see Using The Search Tools (p. 66)).
2. Either:

   Click **Duplicate product** next to the desired product in the search result list:

   Or:

   Click on the desired product hyperlink in the 'Product Name' column of the search result list, and then click the **Duplicate product** button at bottom of the product page

   The duplicated product is displayed. CPNP duplicates all data except the answers to questions relating to ingredients of concern, attached labelling (and packaging where appropriate).

3. Click **Confirm**, make the required adjustments to the duplicated product and click **Save as draft** or **Notify**.

3.1.4. Copying Products To Another Organization

The **Copy your products to another Responsible Person** option in the Admin menu is used to copy a selection of your products to another Responsible Person (in case of merger, for instance). The selected products will then be copied to the designated Responsible Person's user interface, with new CPNP product references, a DRAFT status and a special icon showing that they are coming from another Responsible Person. The recipient Responsible Person will then be able to edit these products with its own information. (All information is copied from the source, except for packaging and labelling information, and contact person details).

In your own interface, the original products will remain unaffected; there will be just another special icon indicating that they have been copied to another Responsible Person.

CONDITIONS FOR COPYING PRODUCTS

Both of the following conditions must be met to be able to copy products:

Condition 1: The user who performs the copy operation belongs to a Parent RP Organization.

(Users from sub-organizations do not even have the **Copy** menu option.)

Condition 2: The copy takes place from the user's Parent Organization to any other Parent Organization.

Please note that the **Copy your products to another Responsible Person** option is available for Responsible Persons in a main organization only. Distributors or Responsible Persons from a sub-organization do not have the **Admin** menu.

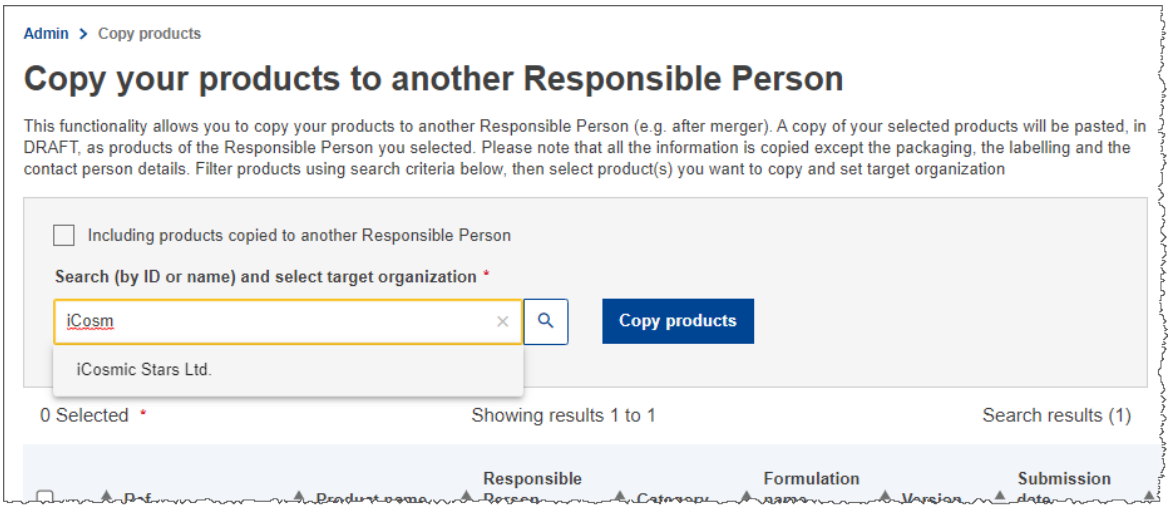

To copy products

1. In the **Admin** menu, select **Copy your products to another Responsible Person**.
2. In the **Search** box, enter either the unique ID of the organization to which you wish to copy products, or the first letters of its name.

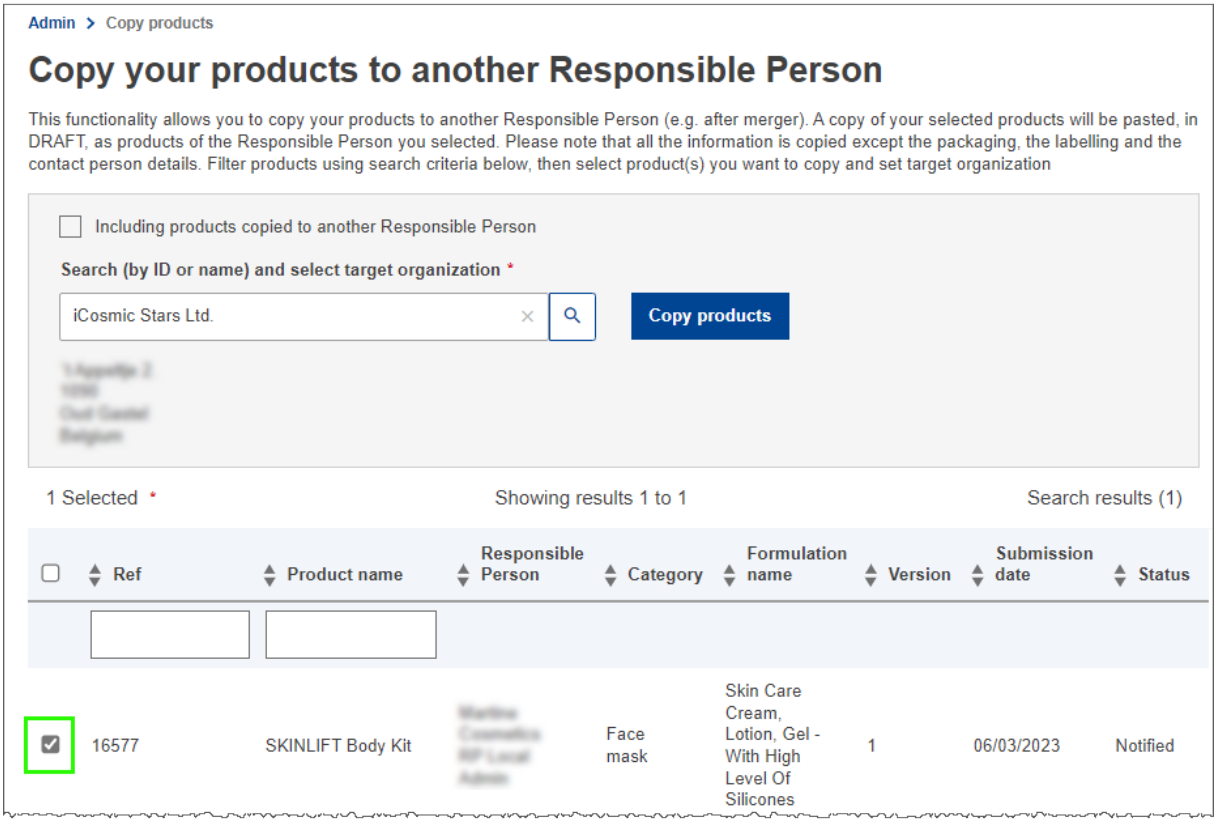

ABOUT RESPONSIBLE PERSON IDS

Every Responsible Person is uniquely identified by a system-assigned ID in CPNP. This ID is part of a Responsible Person's profile and is displayed in their Profile menu.

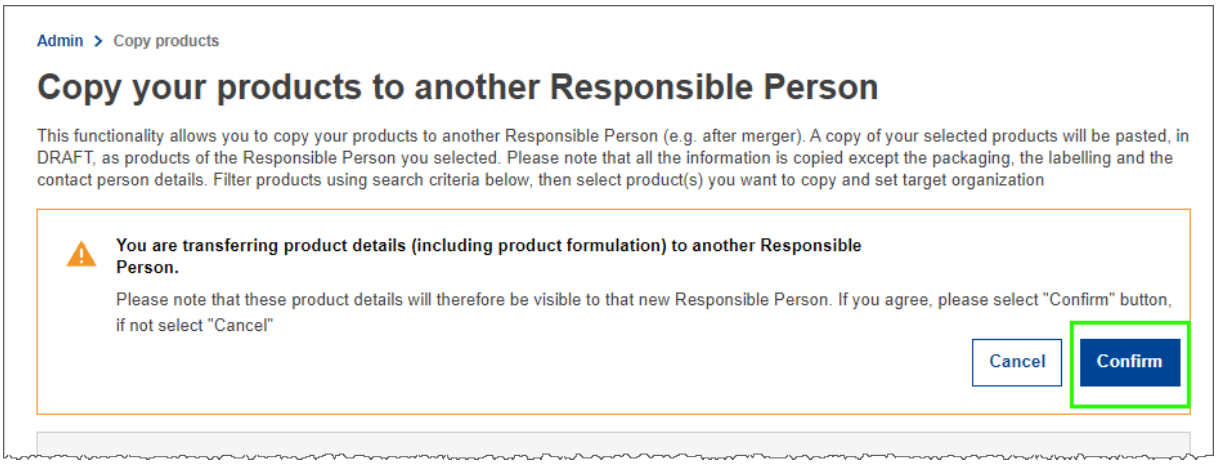

A list of matching organizations is displayed:

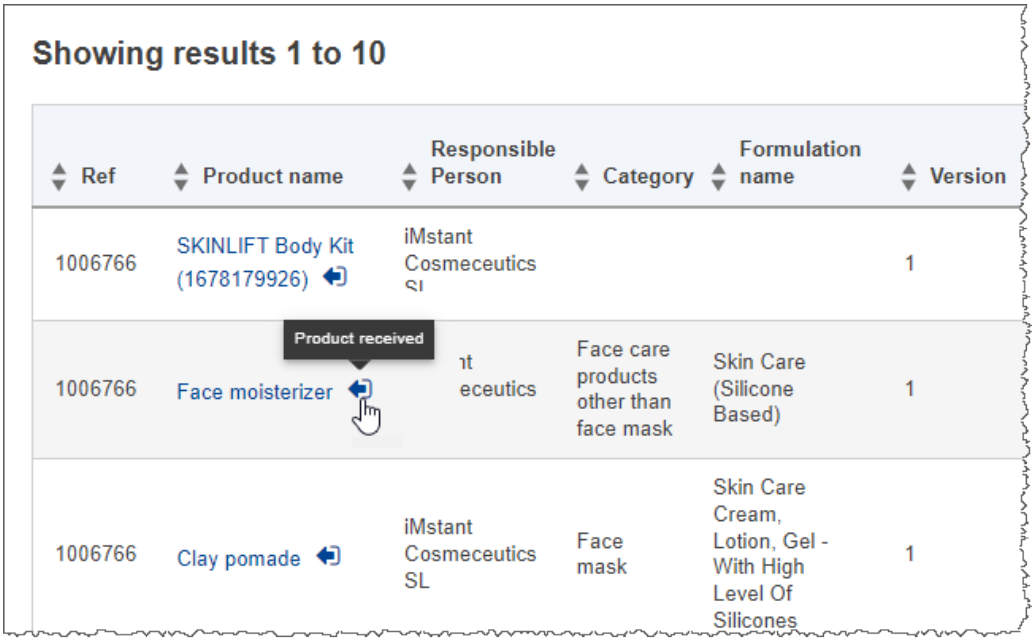

3. Select the desired organization in the list.
4. In the lower table, select the check boxes for each product to be copied:

5. Should you wish to copy products that you did already copy to another organization in the past, please select the **Including products copied to another Responsible Person** check box. This will instantly refresh the lower list to include such products as well.
6. Click **Copy products**.
7. Answer the confirmation message:

The selected products are immediately made available to the recipient Responsible Person in his CPNP user interface. A special icon appears next to those products to indicate that they come from another organization:

Simultaneously, another special icon ( ) appears in your interface next the products that you have copied to other organizations.

3.1.5. Moving Products Between Organizations

The **Move products** option in the Admin menu is used to move one or more products from your organization or one of its sub-organizations to another one of your sub-organizations or to your main (parent) organization. The selected products will then show as DRAFT in the designated Responsible Person's user interface, with the same CPNP Product References. Please note that all the information is kept.

CONDITIONS FOR MOVING PRODUCTS:

Both of the following conditions must be met to be able to move products:

Condition 1: The user who performs the move is a user in a Parent Organization or in a Sub-organization that also has Sub-organizations.

(Sub-organizations without Sub-organizations do not have the **Move** menu option).

Condition 2: Products can only be moved in the following directions:

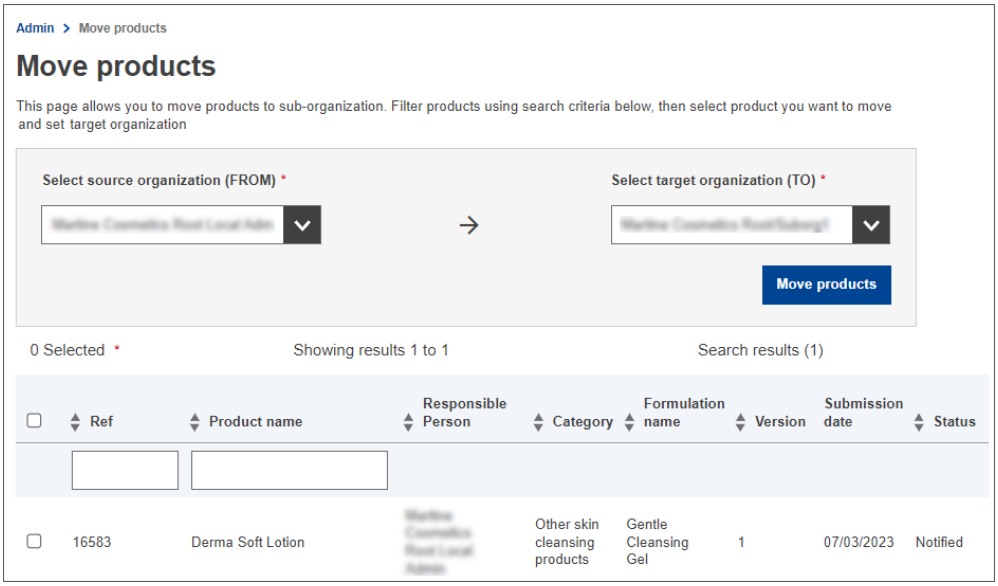

FROM	TO
One of the user's Sub-organizations	Another Sub-organization under the same Parent
The user's Parent Organization	One of its Sub-organizations
A Sub-organization under the user's Parent Organization	The Parent Organization

Please note that the **Move products** menu option is available for Responsible Persons only (i.e., users with a 'Normal' user profile or with a 'Local Admin' profile), provided they belong either to a main (parent) organization that has sub-organizations, or to a sub-organization that also has sub-organizations. In all other cases, the *Move products* menu option will not even show in the *Admin* menu.

To move products

1. In the **Admin** menu, select **Move products**.
2. Pull down the **Select the source organization (FROM)** selection box and select the organization which currently owns the product(s) to be moved.

The list of products belonging to the selected organization is displayed:

3. In the left-most column of the list, select the check boxes for each product to be moved.
4. Pull down the **Select the target organization** selection box and select the organization to which you wish to move the selected products.
5. Click **Move products**.

The selected products are immediately made available to the recipient organization.

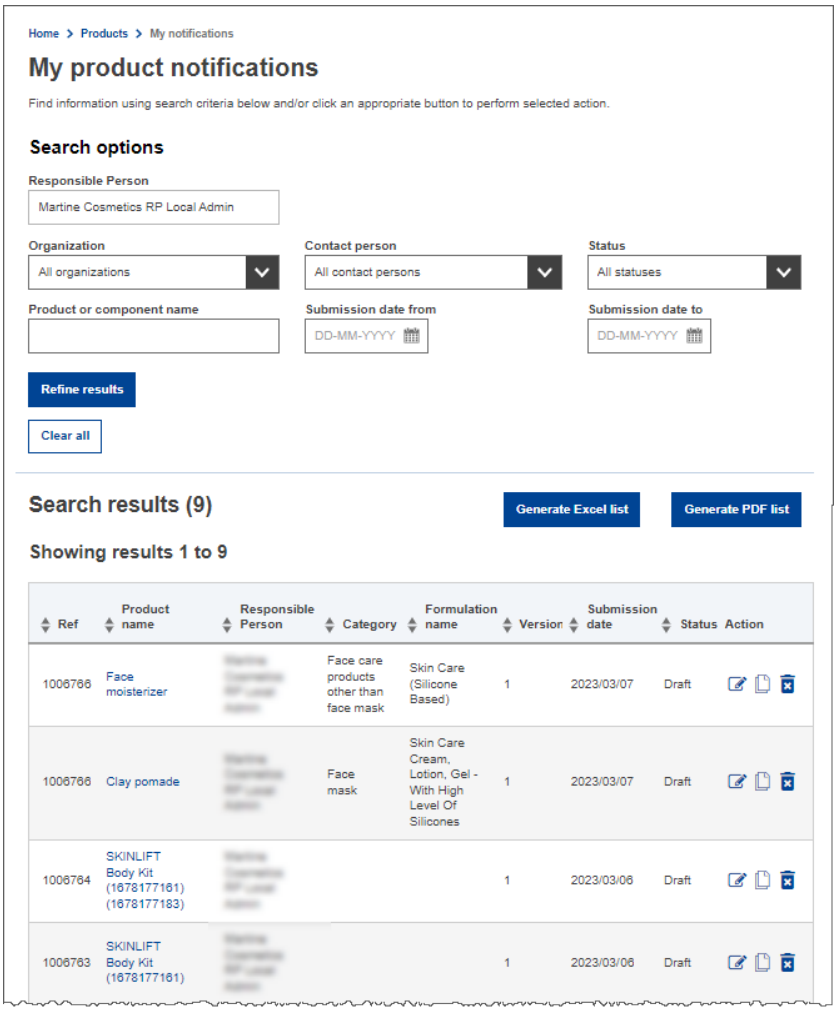

3.1.6. Ensuring Follow-up Of Product Notifications

The **My notifications** option in the *Products* menu provides quick overviews of an RP's products for easy follow-up and management purposes.

Please note that the **My notifications** option is available for Responsible Persons only. Remember that Distributors do not have the **Products** menu.

To consult your product notifications

1. In the **Products** menu, select **My notifications**.
2. By default, the *My product notifications* page displays a list of all *Draft* as well as *Notified* products from your RP/organization, ordered by last modification date:

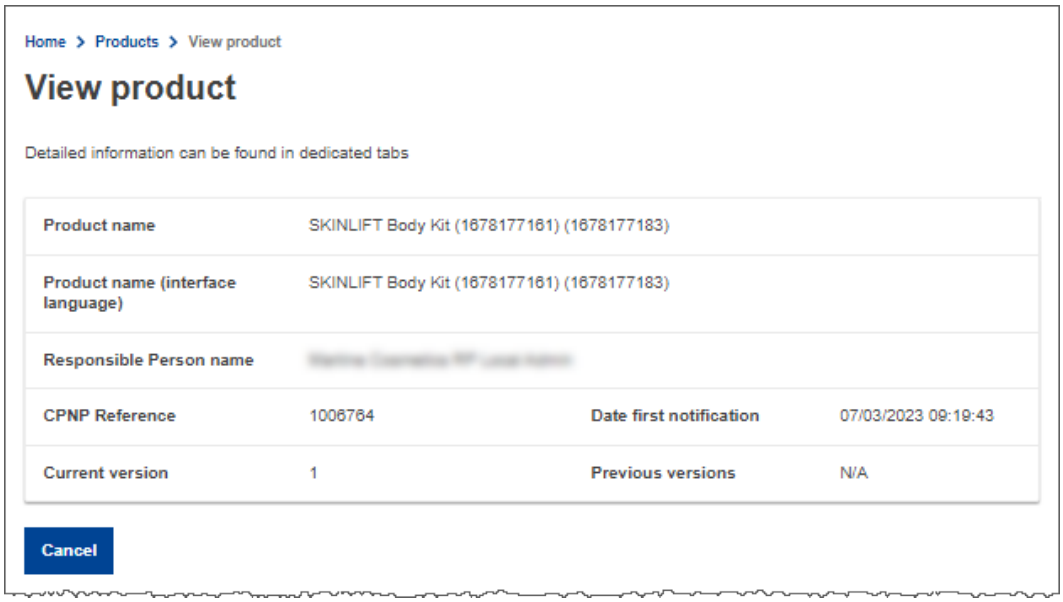

3. You can use the filter options in the upper section on the page to focus only on *Draft* or *Notified* products, or products submitted during a certain period, or with a certain contact person, etc.

3.1.7. Consulting Product Details

To consult the details of a product from a search in the **Products** menu, click the desired **Product Name** hyperlink (this will open the product detail page in edit mode).

Please remember that Distributors do not even have the Products menu. This option if for Responsible Persons only.

In View mode, the upper section (i.e., header) of a product detail page contains the following information:

- product name;
- product name in the interface language;
- responsible person name;
- CPNP reference *i.e.,* the reference given by CPNP to the product;
- current version number (indicating the formula version, not the dataset version);
- date of the first notification;
- previous version(s) of the product (if any).

The lower section of a product page depends on whether the product is a single or multi-component product. See next pages.

3.1.7.1. Single-component Products

The information available in the lower section of a single-component product is organised in the following tabs:

General information

The '*General information*' tab displays some general information on the product, *e.g.*:

- the CPNP reference;
- the industry reference (for industry's internal use);
- the version of the notification;
- the last modification date and time stamp;
- the product name(s), shades (if applicable) and corresponding language(s), given by the responsible person and by the distributors;
- whether the product is specifically **intended for children under 3 years of age**;
- details of the **responsible person** (at least name and address);
- the **contact person** details;
- whether the **product was imported in the Community** (and if so, the **country of origin**);
- the **Member State of first placing on the market**.

Product details

The '*Product details*' tab displays information on:

- the **category** of the product;
- the **physical form** of the product;
- any **special applicator or packaging** in which the product is presented;
- the **pH of the product** (if applicable);
- the **notification type** (*i.e.,* predefined frame formulations, exact concentrations or concentration ranges);
- the **information on ingredients of concern** contained in the product (name and quantity % w/w).

> Please note that where '*Not available*' is indicated, the meaning is indicated in the right column, i.e., either the ingredient is 'not present' in the product (in this case 0% w/w is indicated) or it is present but under the specified concentration of concern.

- the **formulation name** (and formulation number in case of predefined frame formulation);
- the **composition** of the product (predefined frame formulation, exact composition or composition with ranges);
- information on **CMR substances of category 1A or 1B** present in the product;
- information on substances in the form of **nanomaterials** present in the product;

SPECIFIC INFORMATION FOR POISON CENTRES REGARDING HAIR COLOURING PRODUCTS

90% of total hair color market consists of permanent hair coloring products based on oxidative dyes.

Permanent hair coloring products are typically 2-component products which are mixed by the consumer immediately before application to the hair; they are typically left on the hair for 30 minutes before rinsing and drying of the hair.

– Component 1 is usually labelled 'color cream' or 'olor gel' and is usually an off-white or yellow-orange cream or liquid containing the oxidative dyes and the alkali (ammonia or mono-ethanolamine).

– Component 2 is usually labelled developer cream or lotion and is a white liquid containing the oxidant (hydrogen peroxide).

Oxidative dyes themselves are small colorless molecules which diffuse into the hair together with hydrogen peroxide whereupon they start to couple with each other to form larger colored molecules inside of the hair (see SCCS opinion on reaction products in oxidative products SCCS/311/10)

Oxidative dyes can be split into two groups:

– *Primary Intermediates or Precursors* such as p-phenylenediamines and p-aminophenols.

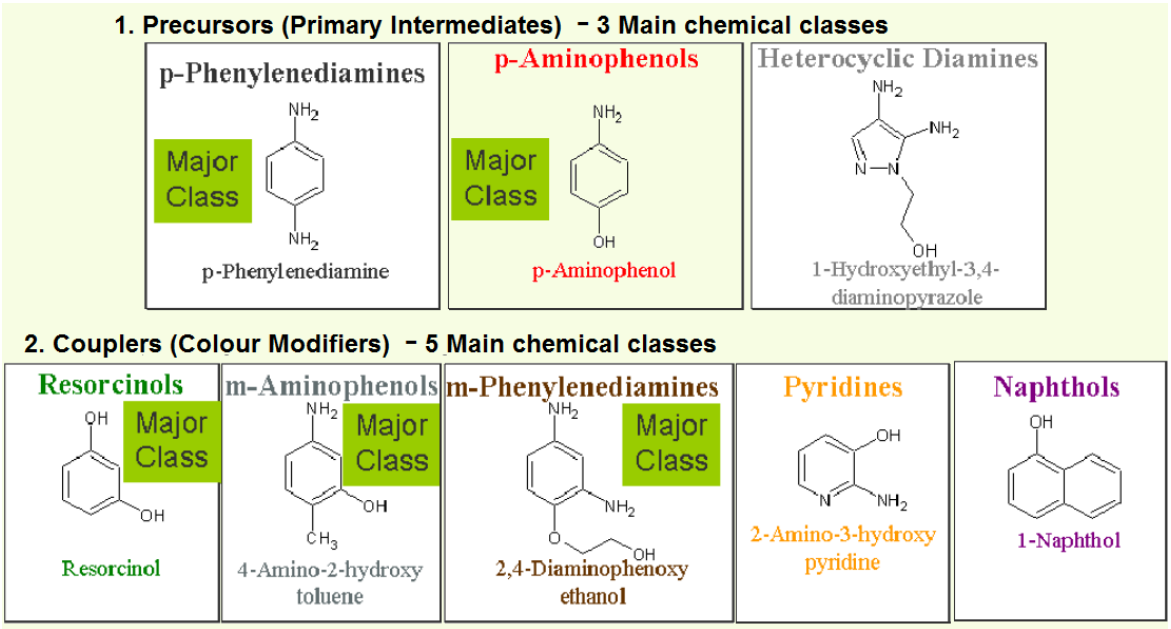

– *Couplers or Color Modifiers* such as resorcinols and m-aminophenols.

The types of precursors and couplers found in commercial products in the EU are relatively limited.

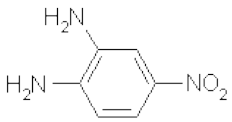

There are 3 classes of Oxidative Primary intermediates. By far the most commonly used are the p-phenylenediamines (e.g. p-phenylenediamine, p-toluenediamine) and p-aminophenols.

There are 5 classes of Oxidative Couplers. The most commonly used are resorcinols, m-aminophenols and m-phenylenediamines

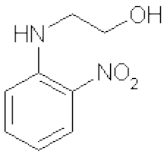

Concentrations in precursors and couplers vary depending on the shades and the way they are formulated. It is worth mentioning that concentrations are often restricted and the maximum level allowed are available in the annexes of the Directive (or via the CosIng database).

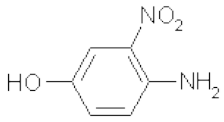

Some permanent hair coloring products combine oxidative dyes with a limited number of direct dyes. The direct dyes are small phenylenediamines and phenols substituted with a nitro group (see examples below).

4-Nitro-o-phenylenediamine

HC Yellow 2

4-Amino-3-nitrophenol

- the **original packaging** of the product;
- the **original labelling** of the product;
- the **original labelling** of the product (text only).

Versions

If multiple versions exist for the same product, the 'Versions' tab indicates into brackets the number of versions available and displays information on these different versions of the notification (period of validity, type of change (update or correction) and the reason for change.

CAs/PICs Comments

This tab appears only if/when national Competent Authorities or Poison Centres have raised points / initiated discussions concerning the product at hand. When available, you can read their comments there, and reply as necessary (*see* Replying to CA/PIC Comments (p. 66).

The following additional buttons are available at the bottom of each tab:

Duplicate product	Duplicates the active notified product (*see* Duplicating Products (p. 44)).
Edit	(available when you opened the product page in View mode) – Used to modify the desired product details (*see* Editing Products (p. 42)).
Export	Exports the notification details to XML. (Please note that the XML generated by this export is not the same as the one used with XMLGate; for details about XMLGate, please download the 'Webservice Upload' documentation on the *Useful links* page).
PDF	Opens the notification as a PDF for consulting, printing and/or saving purposes.
Cancel	Cancels the current action and brings you back to the search page.

3.1.7.2. Multi-component Products

The information available in the lower section of a multi-component product is organised in the following tabs:

General information

The '*General information*' tab displays some general information on the product, *e.g.*:

- **CPNP reference** *i.e.,* the reference given by CPNP to the product;
- the **industry reference** *i.e.*, the reference given by the industry to the product (for industry internal use);
- the **version of the notification**;
- the **last modification date and time stamp;**
- the **product name(s), shades (if applicable) and corresponding language(s)**, given by the responsible person and by the distributors;
- whether the product is specifically **intended for children under 3 years of age;**
- the **responsible person** details (at least name and address);
- the **contact person** details;
- whether the **product imported in the Community** (and if yes, the **country of origin**);
- the **Member State of first placing on the market;**
- the **pH of the mixed product** (if appropriate)
- the **original packaging** of the product
- the **original labelling** of the product
- the **original labelling** of the product (text only)

Component

Each 'Component' tab(s) display(s) information on:

- the component name(s), shades (if applicable) and corresponding language(s), given by the responsible person and by the distributors, if any;
- the **category** of the component;
- the **physical form** of the component;
- the **special applicator or packaging** (if applicable);
- the **notification type** (*i.e.,* predefined frame formulations, exact concentrations or concentration ranges)**;**
- the **information on ingredients of concern** contained in the component (name and quantity % w/w). (Note: where '*Not available*' is indicated, the meaning is indicated in the right column, i.e., **either** it means that the ingredient is '**not present**' in the product (in this case 0% w/w is indicated) or it is present in the product but under the concentration of concern (in this case the concentration of concern is indicated));
- the **composition** of the component (predefined frame formulation, exact composition or composition with ranges);
- the **formulation name** of the component;
- information on **CMR substances of category 1A or 1B** present in the component;
- information on substances in the form of **nanomaterials** present in the component;

- other information of significance for poison centres;
- optionally, the **original packaging** of the component;
- optionally, the **original labelling** of the component;
- optionally, the **original labelling** of the component (text only)

Versions

If multiple versions exist for the same product, the 'Versions' tab indicates into brackets the number of versions and displays information on these different versions of the notification (dates of validity, type of change (update or correction) and the reason for change.

CAs/PICs Comments

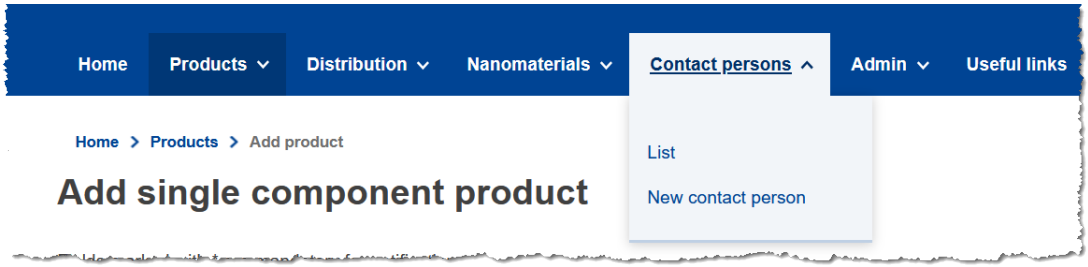

This tab appears only if/when national Competent Authorities or Poison Centres have raised points / initiated discussions concerning the product at hand. When available, you can read their comments there, and reply as necessary (*see* Replying to CA/PIC Comments (p. 66).

The following additional buttons are available at the bottom of each tab:

Duplicate product	Duplicates the active notified product (*see* Duplicating Products (p. 44)).
Edit	(available when you opened the product page in View mode) – Used to modify the desired product details (*see* Editing Products (p. 42)).
Export	Exports the notification details to XML. (Please note that the XML generated by this export is not the same as the one used with XMLGate; for details about XMLGate, please download the 'Webservice Upload' documentation on the *Useful links* page).
PDF	Opens the notification as a PDF for consulting, printing and/or saving purposes.
Cancel	Cancels the current action and brings you back to the search page.

3.2. MANAGING CONTACT PERSONS

The **Contact persons** menu is used to manage (i.e., create, edit, delete) all contact person associated to/that can be associated to notifications.

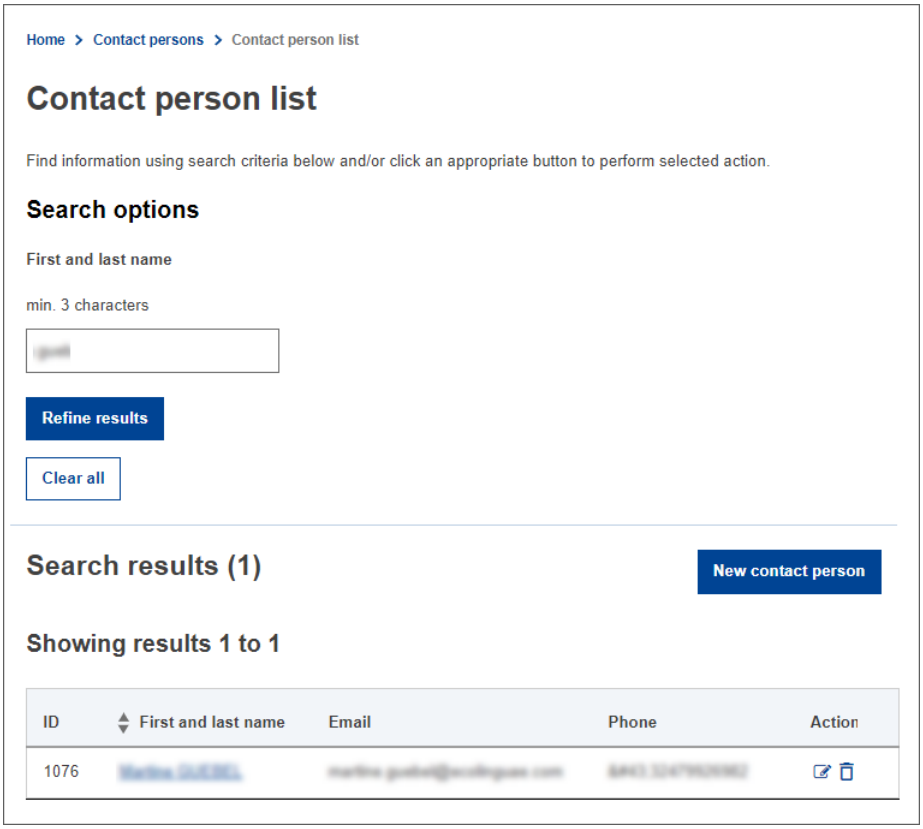

Every contact person that a user creates / modifies on a notification is immediately added to / modified in the **Contact persons** module, and vice versa. Every new Contact person is automatically allocated by a unique ID and is described by its name, postal address, phone and fax numbers and email address.

Please note that the **Contact persons** menu is available for Responsible Persons only.

To consult the contact persons details

1. From the **Contact persons** menu, select **List**.
2. To look for a specific person, enter the first few characters (i.e., min.3 characters) of the person's name or surname in the search box. All matches will be listed in the lower section:

Or,

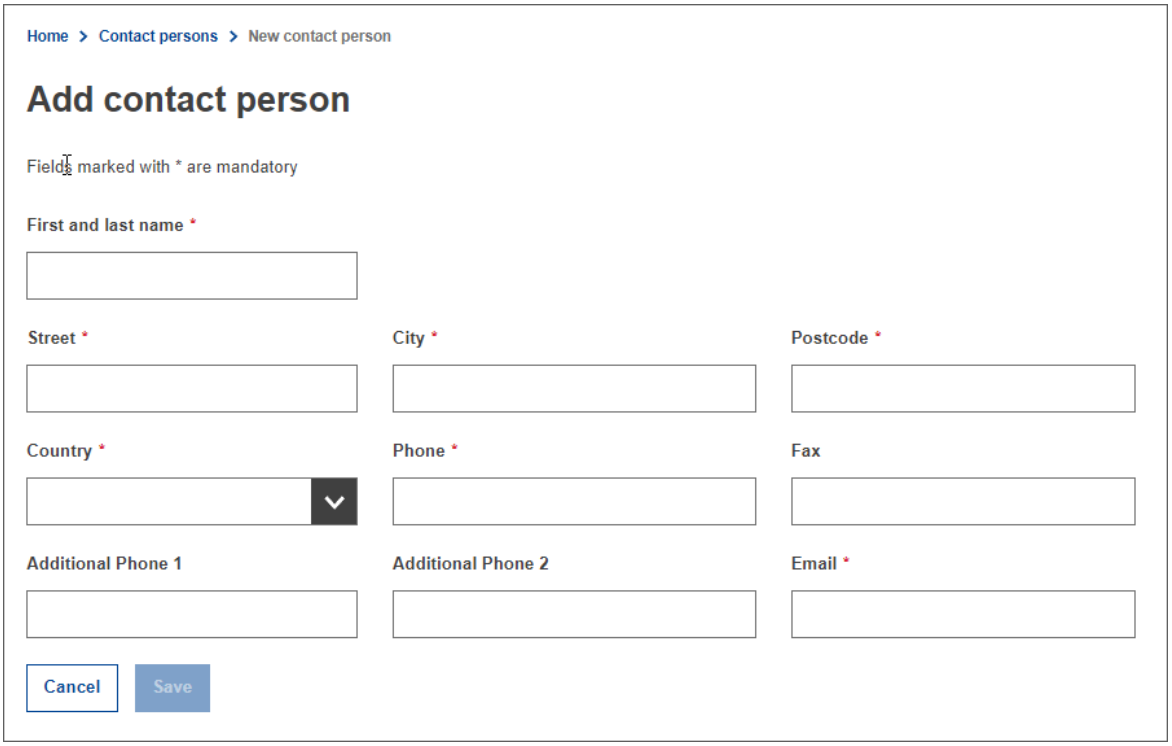

To display the list in full, click **Clear all**.

3. To edit a person in the list, click next to the person, make the appropriate changes, and then click **Save**.
   Or,
   To delete a person, click and answer the confirmation message.
   (Please note that a contact person cannot be deleted if already used in connection with an existing notification. CPNP checks this when you save.)

To add a new contact person

1. From the **Contact persons** menu, select **New contact person**.

   *The **Add contact person** page opens:*

2. Enter all required information about the new contact person.
3. Click **Save**.

   The new contact person is immediately available for use in notifications; simultaneously, he/she will receive an e-mail with information on data protection.

3.3. APPLYING ORGANIZATION CHANGES

Following a corporate event, like a merger, rebranding or strategic repositioning initiative, or a simple error at registration, your organization details may need to be updated in SAAS. This task is reserved for users with a Local Administrator's role in the organization. Changes affecting the name and/or country of an organization in SAAS cause a warning (see Organization Change Warnings (p. 10)) to be displayed for all users of that organization in CPNP if the organization has already notified products in CPNP. The warning will tell users that CPNP has become read-only for their organization and that an action is required from the Local Administrator to lift this restriction by justifying the change(s). All this will be described below.

To apply organization changes (Local Administrator only!)

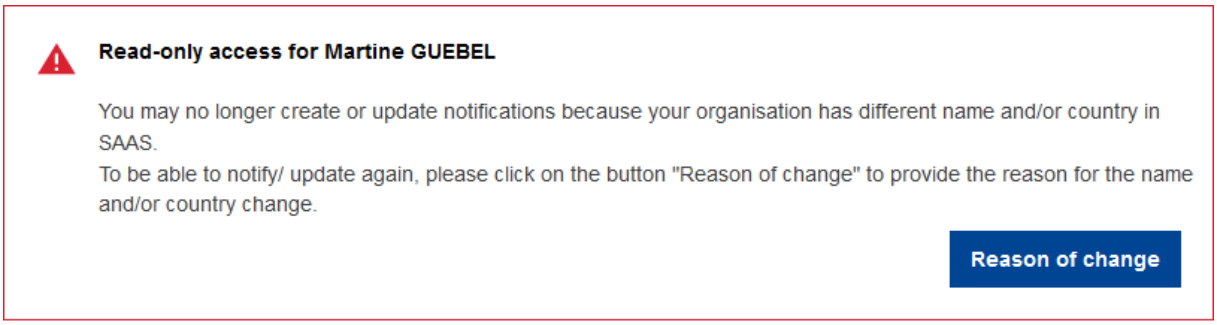

1. Log in to SAAS (https://webgate.ec.europa.eu/saas/).
2. Pull down the **Select an application** selection box, and select **CPNP Products notification Portal** in the list.
3. Select the **Manage** next to the organization for which you are Local Administrator in the resulting *User Profiles* list.
4. Select the **Manage organizations** tab, and then click :

5. Make the required changes to the organization detail form.
6. Click **Save** at the bottom of the page.

> *If you did not change the Name or Country of your organization, the changes are immediately applied. You can skip the following steps. Otherwise, a warning will now show in CPNP next time users from your organization log in to CPNP (see Organization Change Warnings (p. 10)). Being Local Administrator, you are then required to respond to this message in order to lift the resulting temporary read-only restriction for your organization – see next steps.*

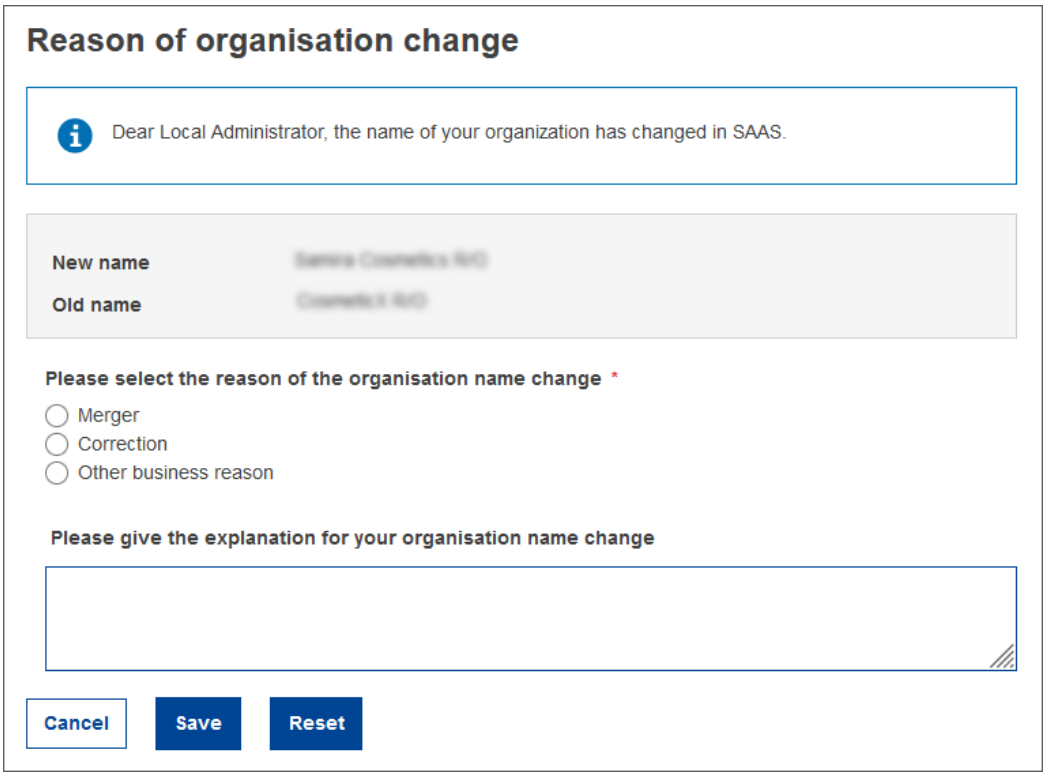

7. Log in to CPNP with your Local Administrator's profile.
8. Click the **Reason of change** button in the warning message:

The rest of the procedure depends on the changes that were made in SAAS i.e.

a. Change of name only

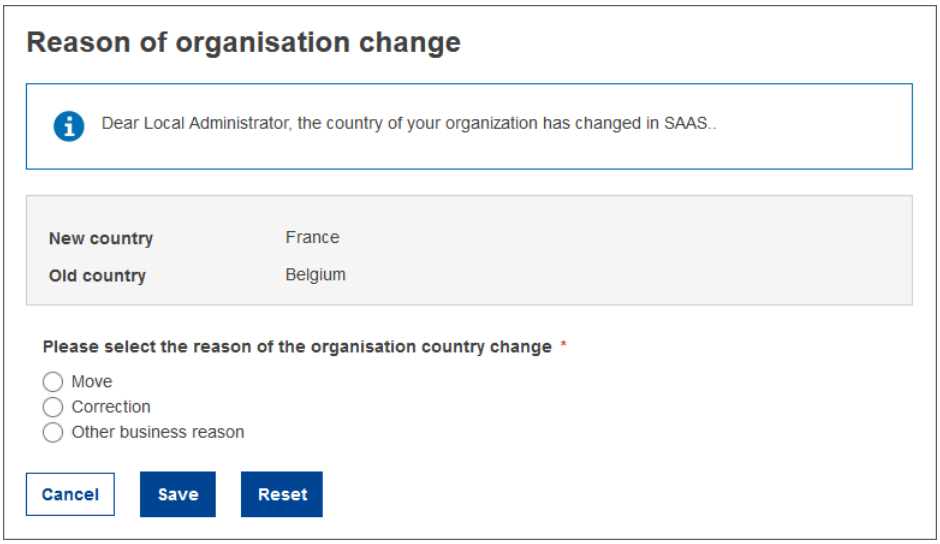

The following screen will show after clicking the hyperlink in the warning message if you only changed the name of your organization in SAAS:

→ Select the appropriate option to justify the change that was made in SAAS, and then click **Save**. Please note that if you select either '**Merger**' or '**Other business reasons – Option 1**', you will be instructed to create a new organization in SAAS.

b. Organization EU country changed to another EU Member State

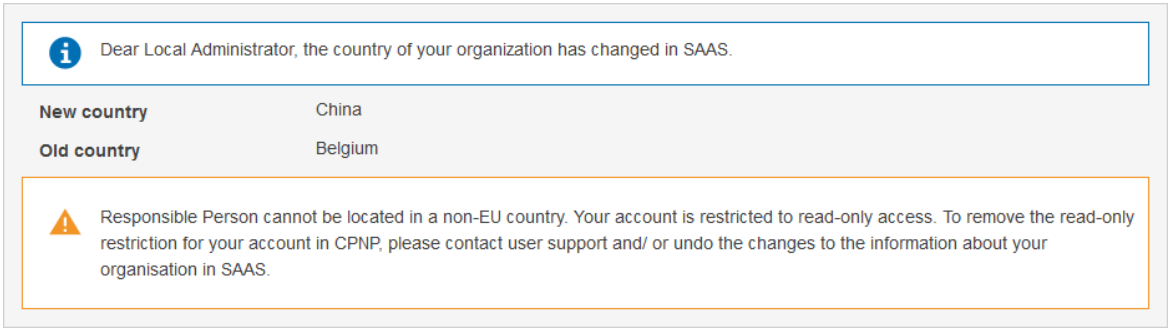

The following screen will show after clicking the hyperlink in the warning message if you changed the country of your organization from an EU country to another EU Member State in SAAS:

→ Select the appropriate option to justify the change of country that was made in SAAS, and then click **Save**.

c. Organization country changed to a non-EU Member State

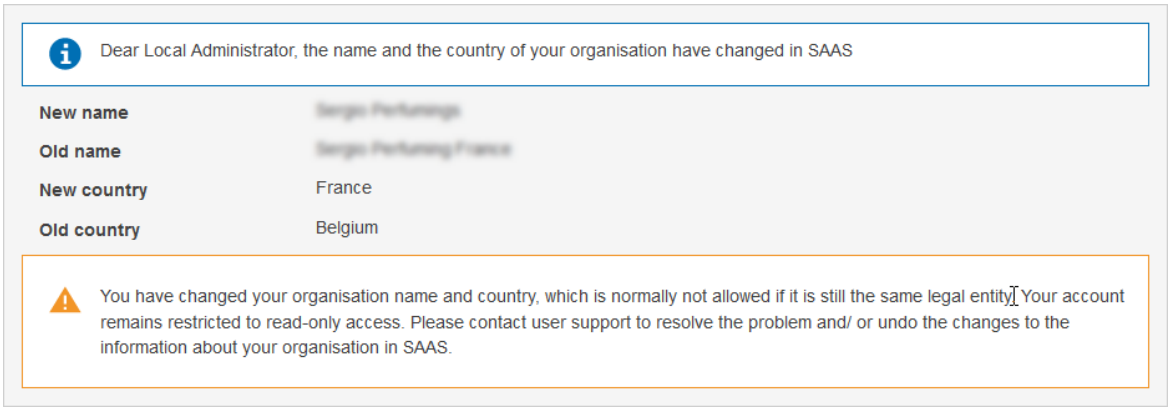

The following screen will show after clicking the hyperlink in the warning message if you changed the country of your organization to a non-EU Member State:

→ Only cosmetic products for which a legal or natural person is designated *within the EU* as a 'responsible person' can be placed on the EU market. Access to the CPNP portal can therefore only be granted to a Responsible Person established in the EU.

d. Change of name *and* country

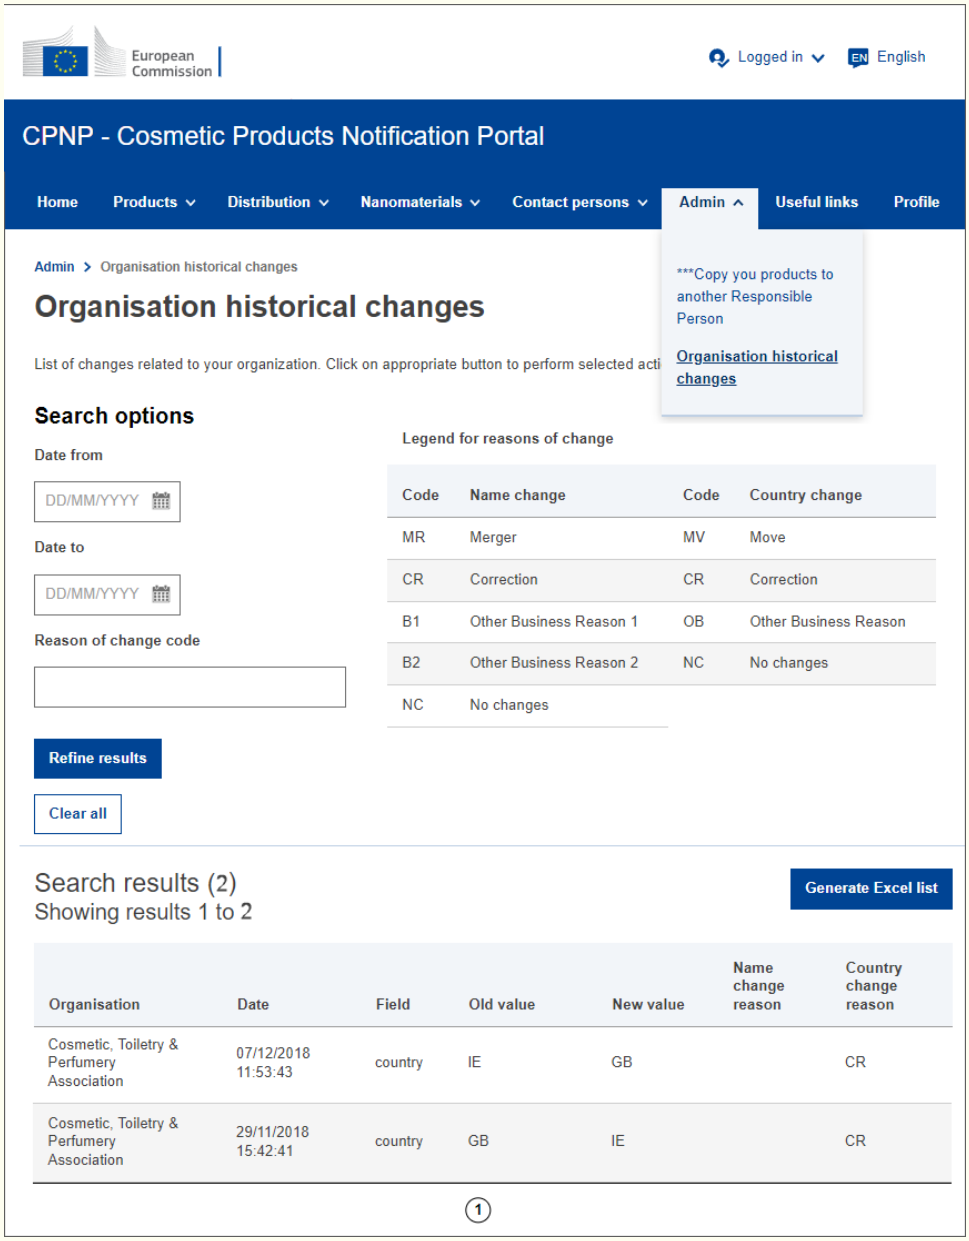

The following screen will show after clicking the hyperlink in the warning message if you changed both the name and country of your organization in SAAS:

→ Please re-consider your changes as this double operation is not allowed in CPNP.

ORGANIZATION HISTORICAL CHANGES

Please note that a history of the successive changes to an organization's details can be consulted using the ***Organization historical changes*** option in the ***Admin*** menu:

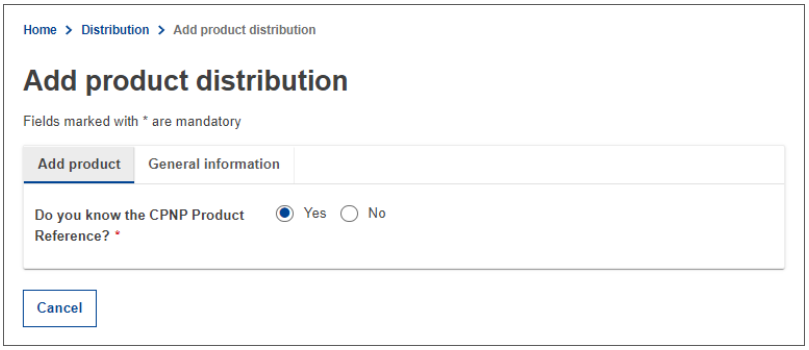

3.4. MANAGING DISTRIBUTION NOTIFICATIONS PURSUANT TO ART. 13(3)

While product notifications need to be carried out by the Responsible Persons in CPNP, and the Distributors do not have access to this information, article 13(3) of the Cosmetic Regulation envisages that, in exceptional cases, in addition to the Responsible Person's notification, the Distributor has to notify certain information to the Commission as well. A specific situation is where a Distributor makes a product available in a Member State for which the marketing of the product was not initially foreseen by the Responsible Person, and the original product label is not in the language(s) of that Member State. In such a situation, the Distributor of the product must notify certain information to CPNP using the dedicated **Distribution** menu, as described below. This menu is also available to Responsible Persons.

3.4.1. Entering New Notifications Pursuant To Art. 13(3)

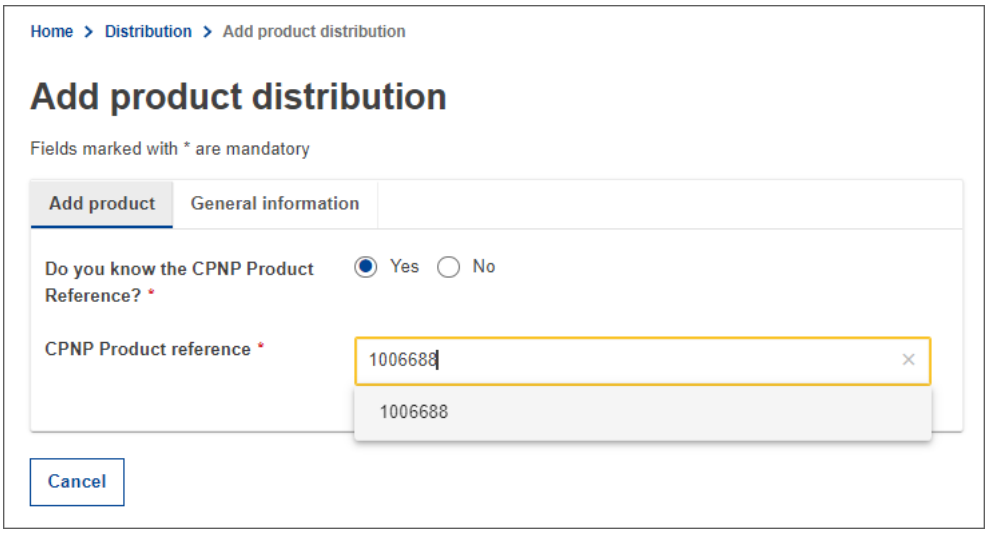

1. Select **Distribution > Notify a product** from the menu bar.

   *The **Add product distribution** page appears:*

2. Answer the question with **Yes** or **No** to indicate whether you know the unique CPNP reference of the product that you wish to notify.

   If you select '**Yes**', you need to enter the CPNP Product Reference in the next input box, and then select it in the list of matching Product References found in CPNP:

   Or,

   If you do not know the CPNP Product Reference and you have selected ' **No**' above:

   a. Enter the (first letters of the) name of the Responsible Person for the product that you want to distribute.

Based on this information, CPNP will display a limited list of results of matching Responsible Person's name:

b. Select the Responsible Person from the list of matching results.

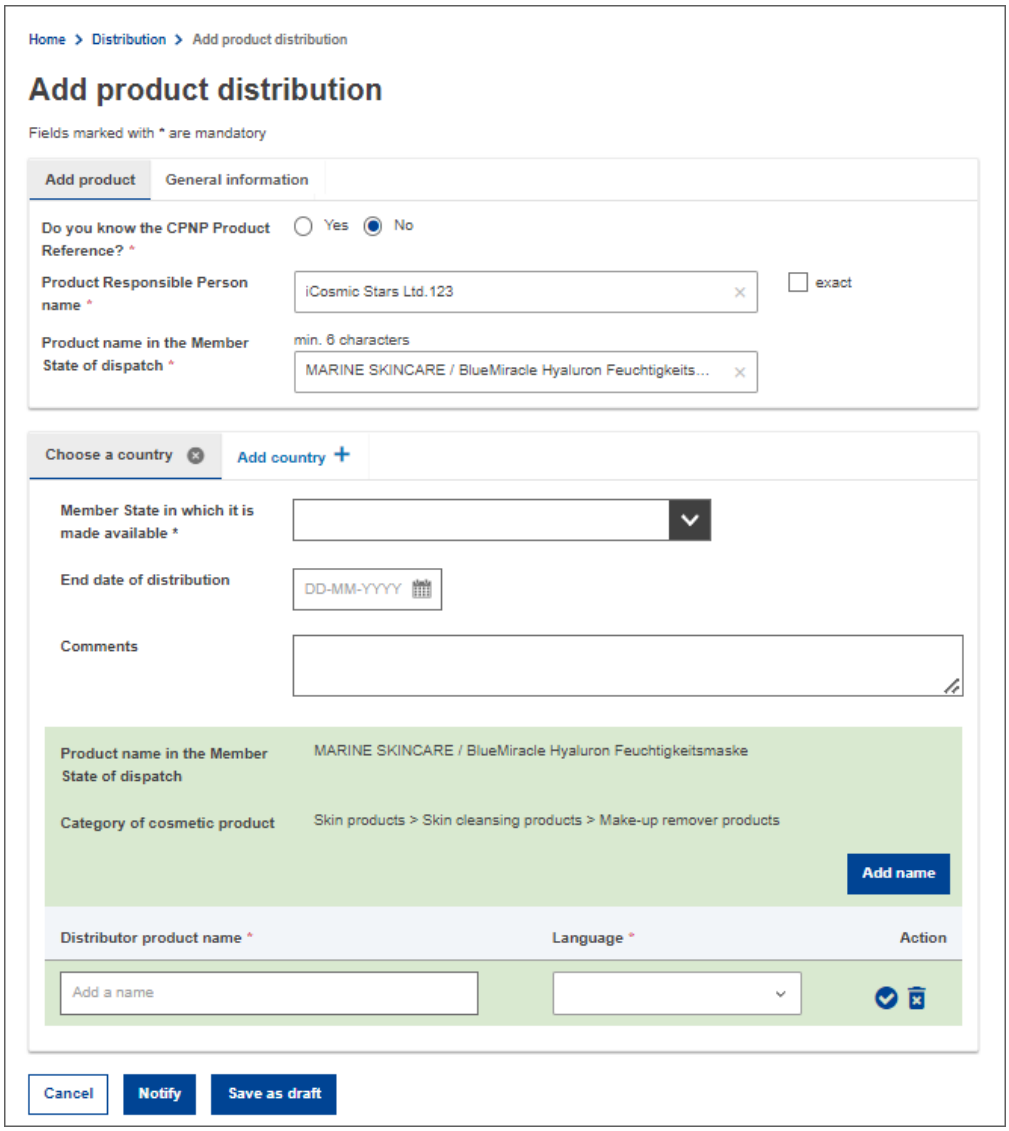

c. Enter at least 5 characters of the searched product in the **Product name in the Member State of dispatch** box.
(The Member State of the dispatch is the country where the product was brought on the market by the Responsible Person).

Based on this information, a limited list of matching product names is displayed.

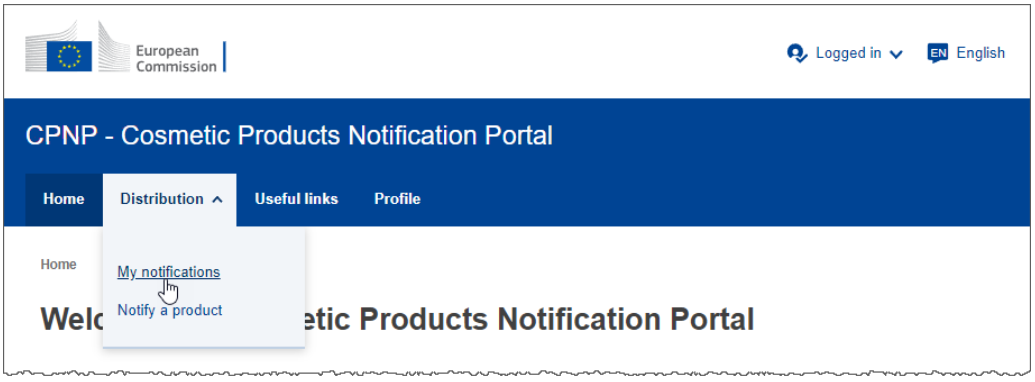

d. Select the desired product in the list of the proposed results.

The second part of the page appears:

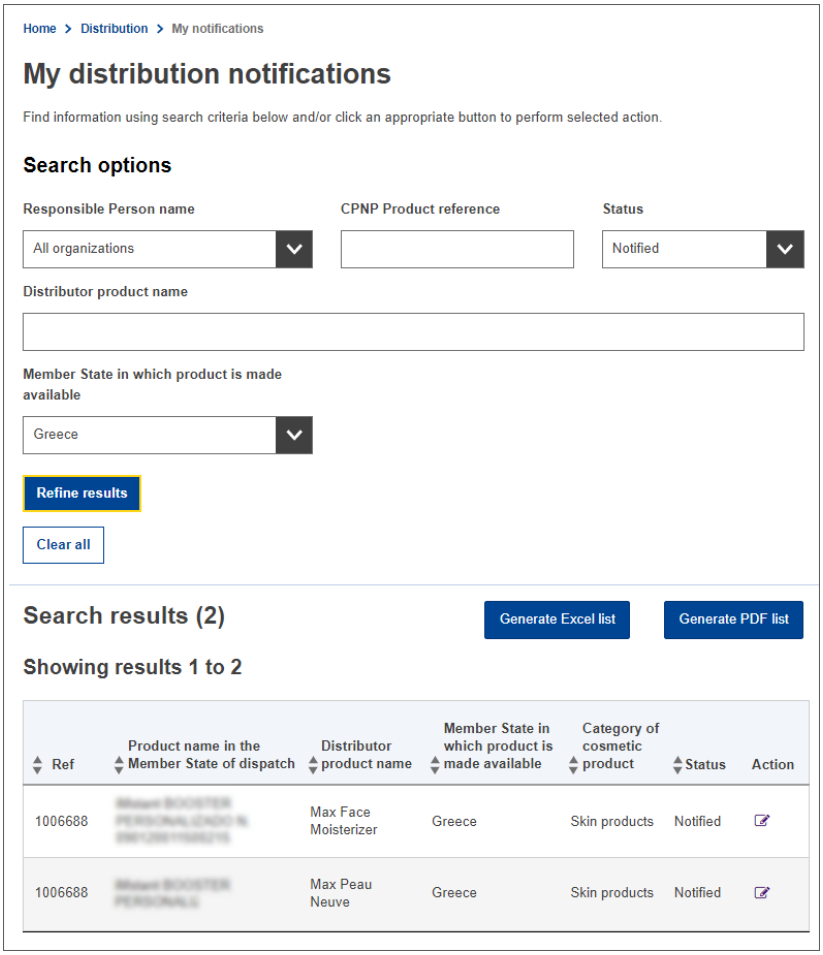

3. Complete the second part of the page as follows:
   a. Select the **Member State in which it is made available**.
      (The Member State where the product is made available is the Member State where you are bringing the product on the market).
   b. Specify an **End date of distribution** if required.
   c. In the **Comments** box, enter any comments or remarks about the distribution if necessary.
   d. In the **Distributor product name** box, enter the name of the product as given by the distributor in the selected country, in the specified language. (The same product in the same country can be distributed under different names in different languages).
   e. If the product is distributed in more than one country, you can click the **Add country** button to enter the translations per country.
4. To save the notification as draft, click **Save as draft**.
   Or,
   When the information on the distribution notification is complete, click **Notify**. The information will then be made available to Competent Authorities and Poison Centres. It will be linked to the original notification of the product being distributed. Please note that it will no longer be possible to delete the notification by that time. Only updates will be possible.

3.4.2. Consulting Notifications Pursuant To Art. 13(3)

Using the dedicated **My notifications** option in the **Distribution** menu, Distributors can look for products/notifications under Article 13 of Regulation (EC) No 1223/2009 based on any combination of the following criteria: Responsible Person name, CPNP Product reference, Status of the related notification (i.e., 'Draft' or 'Notified'), Distribution product name, Member State in which the product is made available by the Distributor and/or :

3.4.3. Editing Notifications Pursuant To Art. 13(3)

Once a search for notifications pursuant to Article 13(3) has been performed, click next to the notification that you wish to edit, update or correct, make your changes and then click **Save**.

3.5. REPLYING TO CA/PIC COMMENTS

Using the **CAs/PICs Comments** tab on a product notification page, national Competent Authorities and Poison Centres can raise points / initiate discussions with a Responsible Person (p. 7) in case they need any clarifications or have any queries or comments about a product. Competent Authorities/Poison Centres can only see the discussions that they have personally initiated, as well as the feedback to these, given by the Responsible Person. Responsible Persons, on the other hand, are expected to provide feedback to any such comments left by national Competent Authorities and/or Poison Centres on the notifications that they are in charge of.

To reply to a comment

1. Either click the link in the comment that you have received by email.
   Or,
   Perform a search and open the commented product to which you wish to reply.
2. Select the **CAs/PICs Comments** tab.
3. Click **Reply** next to the desired comment.
4. Type your reply in the **Your Reply to (…)** box.
5. Click **Send**.

Your reply is added to the CAs/PICs Comments tab; simultaneously, an email is sent to the Competent Authority or to the Poison Centre that posted the comment.

3.6. USING THE SEARCH TOOLS

The **Products** menu offers 2 search options for finding products, organizations and notifications i.e.

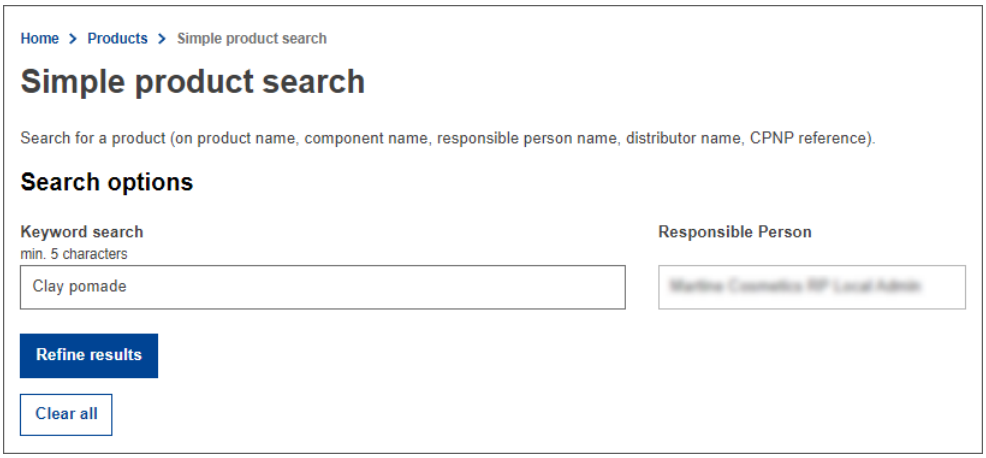

- Simple product search
- Advanced search

In addition to these standard product/notification search features, a dedicated Search option is available in the **Distribution** menu to look for a product/notification based on: i) the Product Name in the Member State where the Distributor made it available, ii) the Member State where the product is made available by the Distributor and/or iii) the status of the notification (i.e., 'Draft' or 'Notified').

3.6.1. Simple Search

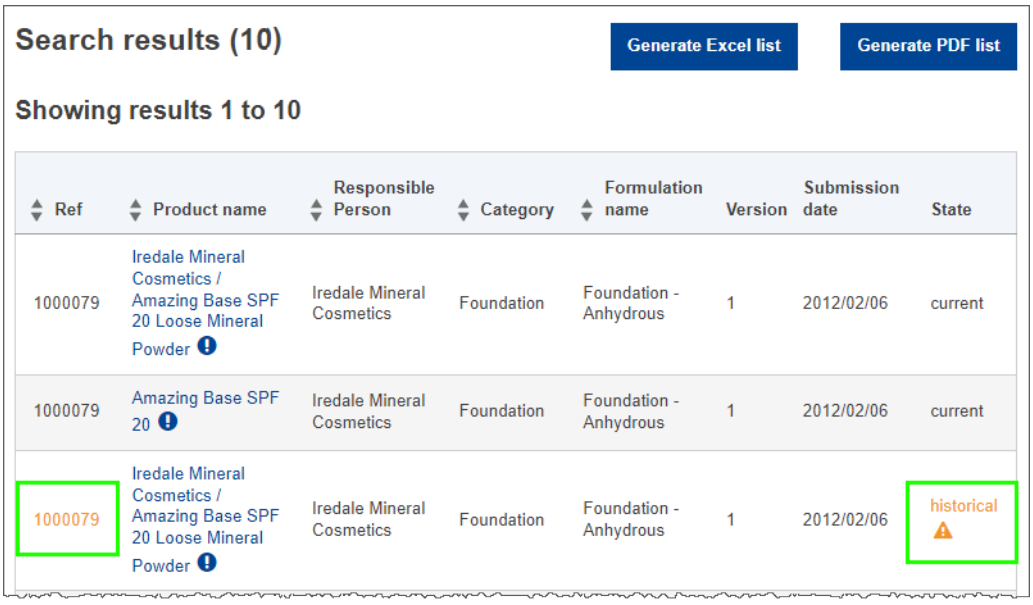

The **Simple product search** option in the **Products** menu allows you to quickly search for (current and historic versions of) notifications using keywords. To reduce the amount of data returned **at least 5 characters** must be entered and the number of results is limited to 100.

As a Responsible Person, you can find only notifications that you (or users acting on your behalf) have entered into the system. A Responsible Person with several users acting on his/her behalf can find any notifications entered by these users. A Responsible Person can search for draft and submitted notifications.

The *Simple product search* feature searches on product names (including Distributed Product names), component names, responsible person names, distributor names, CPNP references, etc.

When multiple versions exist for a notification, you can select the **Include historical versions** box to include in the search any previous (i.e., *historic*) versions of the searched notification(s) as well. Historic versions in the *Search results* section will be identified by an orange reference number, while the word 'historical' will appear in the **State** column. The current version of a notification, on the other hand, is always displayed in normal font, with the word 'current' in the *State* column:

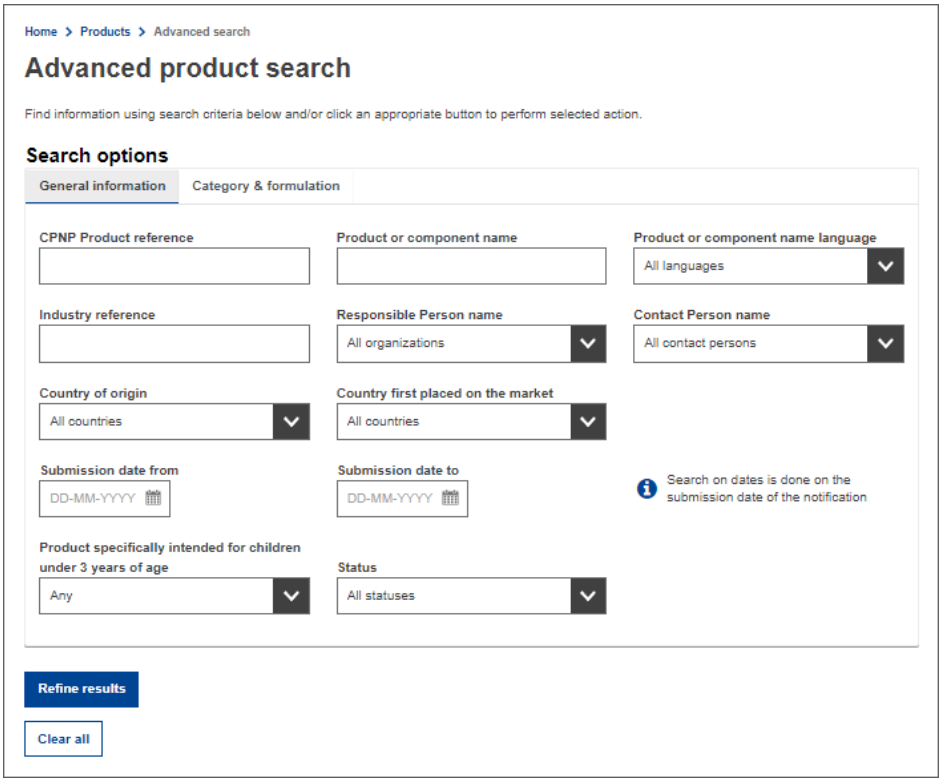

3.6.2. Advanced Search

The **Advanced search** option in the **Products** menu allows you to search for (current and historic versions of) products within CPNP by combining multiple search criteria.

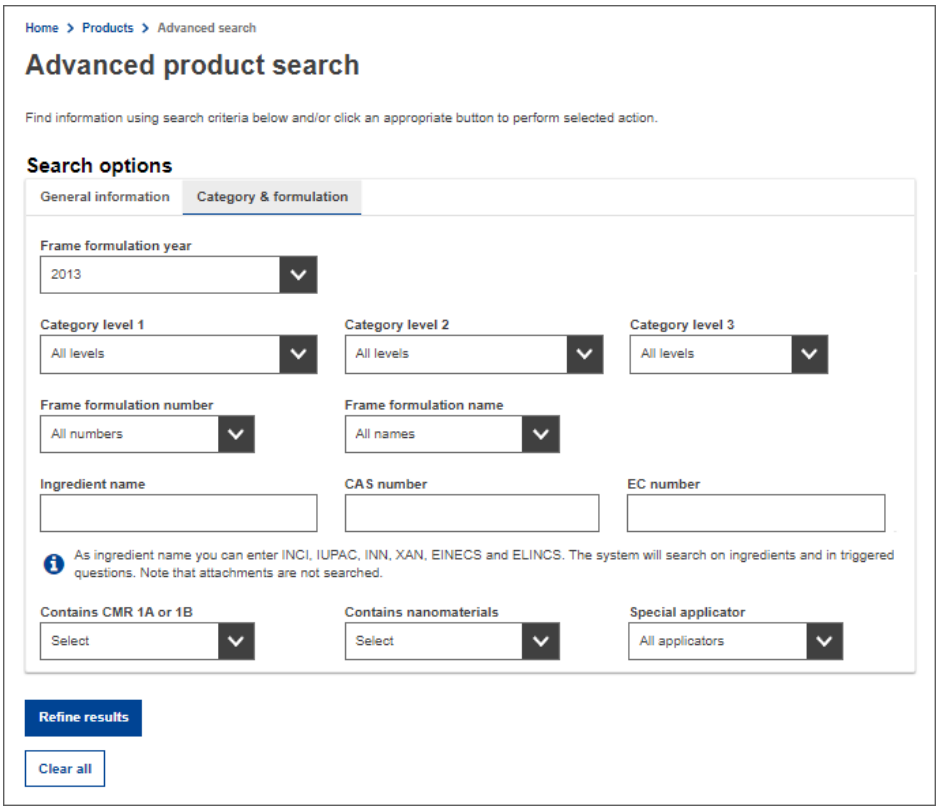

The Advanced search criteria are organized on two different tabs i.e., **General information** and **Category & formulation**. You can combine multiple search criteria in both tabs at the same time. The **Refine results** buttons will consider the search criteria entered in both tabs.

- The **General information** tab allows you to search on the following general information criteria about the product:

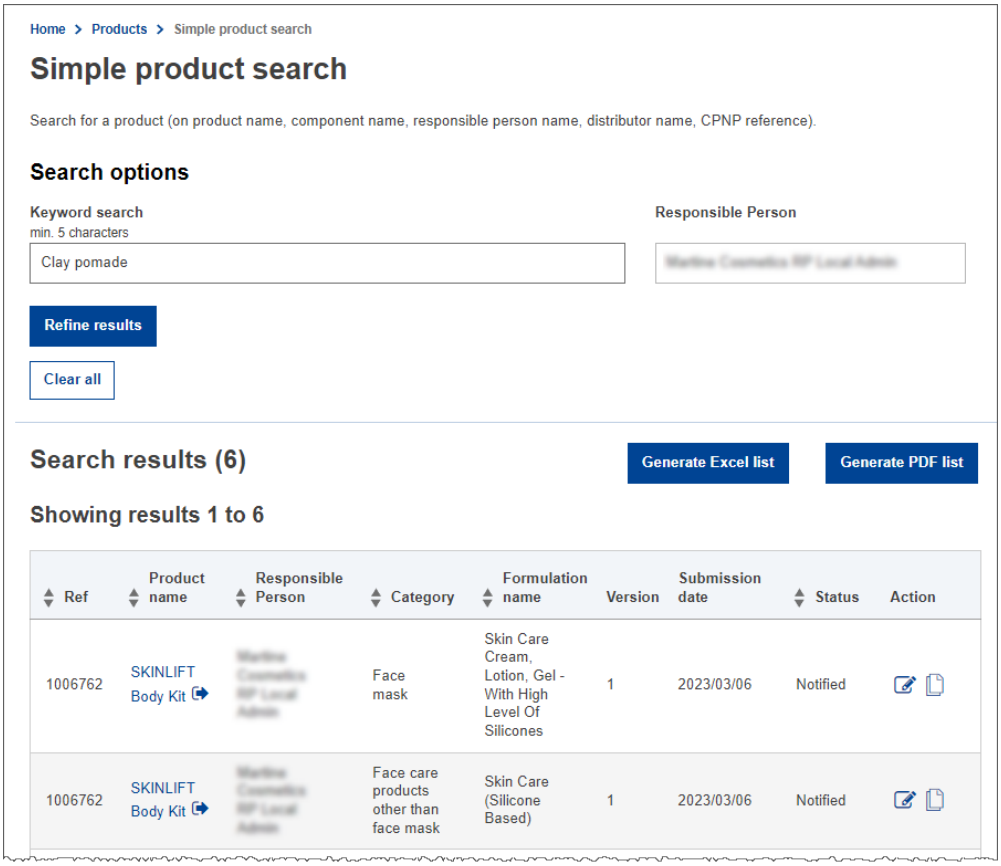

- The **Category & formulation** tab allows you to search on the following criteria related to the category and the formulation of the product:

Home > Products > Advanced search
Advanced product search
Find information using search criteria below and/or click an appropriate button to perform selected action.
Search options
General information
Category & formulation
Frame formulation year
2013
Category level 1
All levels
Category level 2
All levels
Category level 3
All levels
Frame formulation number
All numbers
Frame formulation name
All names
Ingredient name
CAS number
EC number
As ingredient name you can enter INCI, IUPAC, INN, XAN, EINECS and ELINCS. The system will search on ingredients and in triggered questions. Note that attachments are not searched.
Contains CMR 1A or 1B
Select
Contains nanomaterials
Select
Special applicator
All applicators
Refine results
Clear all

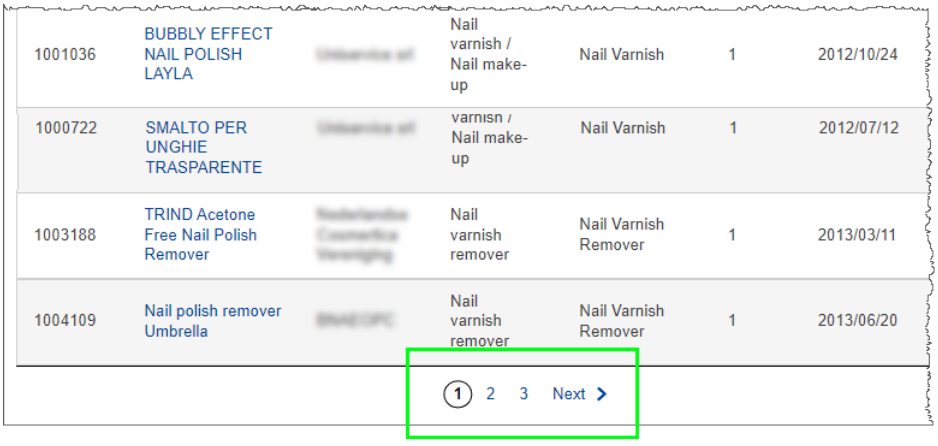

3.6.3. Consulting Notifications

Once a simple product search or an advanced search has been performed, CPNP displays a list of matching notifications:

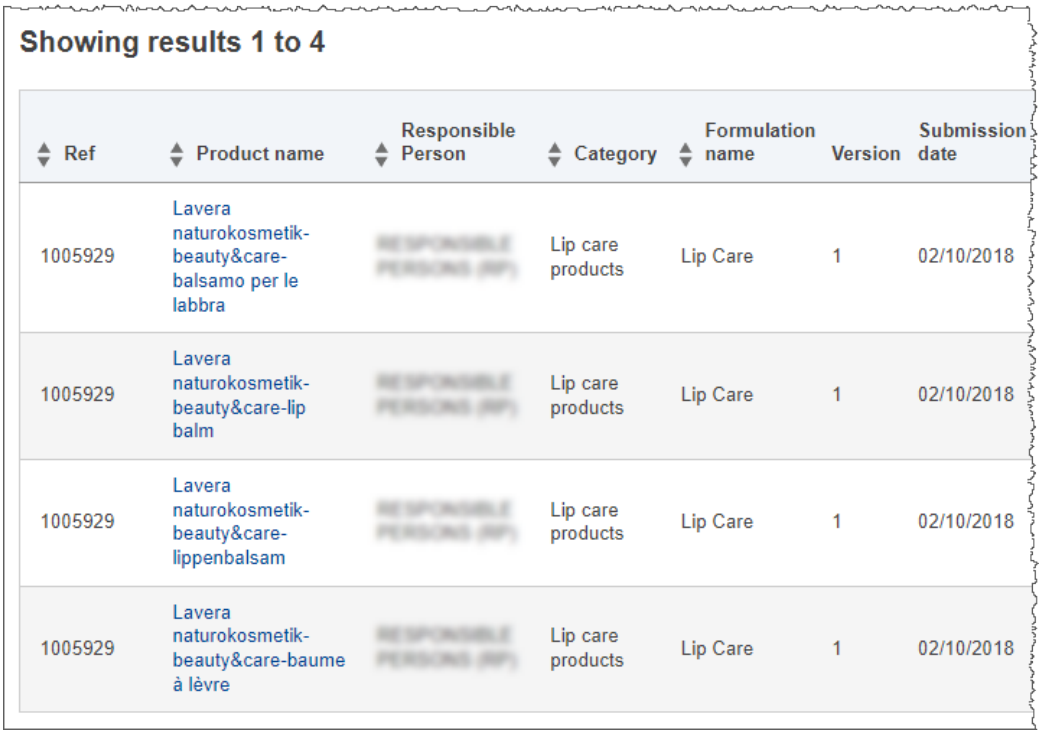

When multiple versions exist for a notification, any historic version in the *Search results* section will be identified by an orange reference number, while the word '*historical*' will appear in the *State* column. The current version of a notification, on the other hand, is always displayed in normal font, with the word 'current' in the *State* column.

When more than 10 results are found, they are listed 10 by 10 on as many pages. Use the page browse button at the bottom of each page to quickly navigate from one page to another:

Please note that some products may appear several times with the same CPNP reference number in the search results section. These are products for which the Name has been supplied in more than one

language. In the example below, the same 1005929 lip care product appears in Italian, English, German and French:

Showing results 1 to 4

Ref	Product name	Responsible Person	Category	Formulation name	Version	Submission date
1005929	Lavera naturokosmetik-beauty&care-balsamo per le labbra	[redacted]	Lip care products	Lip Care	1	02/10/2018
1005929	Lavera naturokosmetik-beauty&care-lip balm	[redacted]	Lip care products	Lip Care	1	02/10/2018
1005929	Lavera naturokosmetik-beauty&care-lippenbalsam	[redacted]	Lip care products	Lip Care	1	02/10/2018
1005929	Lavera naturokosmetik-beauty&care-baume à lèvre	[redacted]	Lip care products	Lip Care	1	02/10/2018

Please note as well that the categories mentioned in the '*Category*' column are the lowest level product categories associated to the respective products i.e., Category level 3.

Different symbols may appear for some notifications in the **Product name** column. These include:

SYMBOL	MEANING
	Some comments are available about the notification
	The product has been transferred to another Responsible Person (p. 7)
	The product was received from another Responsible Person

2 additional buttons i.e., Generate Excel list and Generate PDF list, are available at the top right of the *Search results* section, to export the list in PDF or XLS format.

Appendix – Rules on Specific Ingredients of Concern and/or pH Values

▶ Rule 1 – Ethanol and/or isopropanol

The percentage weights (w/w) of ethanol and/or isopropanol must be specified for all products. n updated notification is required when the content of either ingredient or the sum of both ingredients changes by more than:

- 5 if the value declared previously is < 30%
  Examples:
  – A change from 20% of ethanol to 26% ethanol constitutes a change of 6 in the ethanol content in the formulation and therefore requires an updated notification.
  – A change from 20% of ethanol and 20% isopropanol to 23% of ethanol and 24% of isopropanol constitutes a change of 7 of the sum of ethanol and isopropanol in the formulation and therefore requires an updated notification.
- 10 if the value declared previously is ≥ 30%

If ethanol or isopropanol are not present in the cosmetic product, then 'Not available' *must be checked.*

- Declarations of percentage weights may be rounded to the nearest whole number
- If the percentage weight is below 1%, it can be specified as 1%.

▶ Rule 2 – Antidandruff products

The INCI name and the concentration of the antidandruff agent(s) must be specified.

An updated notification is required when the concentration of the antidandruff agent changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

▶ Rule 3 – Anti-hair loss products

The INCI name and the concentration of the anti-hair loss agent(s) must be specified.

An updated notification is required when the concentration of the anti-hair loss agent changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

▶ Rule 4 – Skin lightening products containing anti-pigmenting and/or depigmenting agent(s)

The INCI name and the concentration of anti-pigmenting and depigmenting agent(s) must be specified.

An updated notification is required when the concentration of at least one agent changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Regulation (EC) No 1223/2009 annexes.

If anti-pigmenting and depigmenting agent(s) are not present in the cosmetic product, then 'Not available' *must be checked.*

▶ Rule 5 – Chemical exfoliation products containing chemical exfoliating agent(s) (e.g. lactic acid, glycolic acid, salicylic acid)

The INCI name and the concentration of chemical exfoliating agent(s) must be specified.

An updated notification is required when the concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

▶ Rule 6 – Products containing vitamin A and derivatives (e.g. retinol, retinyl esters)

The exact content of vitamin A or any of its derivatives must be specified if the level exceeds 0.20% (calculated as retinol) or if the amount exceeds 0.09 grams (calculated as retinol) for the whole product.

An updated notification is required when the concentration of vitamin A or derivatives changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

If the level of vitamin A or any of its derivatives does not exceed 0.20% (calculated as retinol) or if the amount does not exceed 0.09 grams (calculated as retinol) or if vitamin A or any of its derivatives are not present in the product, then 'Not available' *must be checked.*

▶ Rule 7 – Products containing xanthine derivatives (e.g. caffeine, theophylline, theobromine, plant extracts containing xanthine derivatives e.g. Paulinia cupana (guarana) extracts/powders)

Should a product contain more than 0.5% xanthine derivatives, the INCI name and the concentration of the derivative(s) must be specified.

An updated notification is required when the concentration changes by more than 20% of the value declared previously.

If xanthine derivatives are not present or present below 0.5% in the cosmetic product, then 'Not available' *must be checked.*

▶ Rule 8 – Products containing cationic surfactants with 3 or 4 chains or groups with a length shorter than C12 (incl. straight, branched, cyclic or aromatic groups)

The INCI name and the concentration of these cationic surfactants must be specified if the surfactant is used for non preservative purpose.

An updated notification is required when the concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

Typical examples for cationic surfactants covered by this rule are:

- behenalkonium chloride
- behentrimonium chloride
- cetrimonium chloride
- dodecylbenzyltrimonium chloride

If cationic surfactants are not present in the product, then 'Not available' must be checked.

▶ Rule 9 – Products containing propellants

The INCI name and the concentration of each propellant must be specified.

An updated notification is required when either of these concentrations changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

If propellants are not present in the product, then 'Not available' must be checked.

This rule concerns aerosol spray products and any other product which are presented in aerosol spray.

Other products may be presented in pressurized packaging but do not create aerosol sprays upon application. This needs to be indicated as 'pressurised container – non spray product' in the field for 'special applicator'. In this case an applicable frame formulation can be chosen for the product, even if it does not specifically mention propellants.

▶ Rule 10 – Products containing or releasing hydrogen peroxide

The concentration of hydrogen peroxide and/or the INCI name and concentration of the compounds releasing hydrogen peroxide must be specified.

An updated notification is required when the concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

If hydrogen peroxide and compounds releasing hydrogen peroxide are not present in the product, then 'Not available' must be checked.

This rule concerns hair colorant products, hair bleach products, permanent wave products, and hair straighteners.

▶ Rule 11 – Products containing reducing agents

The INCI name and the concentration of each reducing agent must be specified.

An updated notification is required when either of these concentrations changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

This rule concerns depilatories, hair dyes, dye removers and permanent wave products.

Examples for reducing agents typically used are:

- thioglycerin
- ammonium thiolactate
- sodium sulfite
- thioglycolic acid and its salts (ammonium thioglycolate, ethanolamine thioglycolate)
- cysteine HCl
- sodium hydroxymethane sulfonate
- sodium metabisulfite
- alkaline and earth alkaline sulphides
- sodium hydrosulfite

If reducing agent(s) are not present in the product, then 'Not available' must be checked.

▶ Rule 12 – Products containing persulfates

The INCI name and the concentration of each persulfate must be specified.

An updated notification is required when either of these concentrations changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

If persulfate(s) are not present in the product, then 'Not available' must be checked.

▶ Rule 13 – Products containing hair straightening agents

The INCI name and the concentration of straightening agents must be specified.

An updated notification is required when either of these concentrations changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

Examples of **straightening agents typically used** include:

- sodium hydroxide, potassium hydroxide, lithium hydroxide
- calcium hydroxide
- reducing agents e.g. ammonium thiolactate, ammonium thioglycolate, cysteine HCl, ethanolamine thioglycolate
- potassium citrate
- guanidine carbonate

▶ Rule 14 – Bath salts/cubes containing inorganic sodium salts

The total concentration of sodium salts must be specified.

An updated notification is required when the total concentration of inorganic sodium salts changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

▶ Rule 15 – Toothpastes and mouthwashes containing Fluoride compounds

The concentration of fluoride compounds (calculated as Fluorine), must be specified.

An updated notification is required when the fluorine concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

If fluoride compounds are not present in the product, then 'Not available' must be checked.

▶ Rule 16 – Products with a pH lower than 3 or higher than 10, and pH of hair coloring products

The pH of **single-component products or individual component (except for hair dyes)** must be specified in the pH field if it is lower than 3 or higher than 10.

In the case of **multiple component products (except for hair dyes)** that are mixed prior to use, the pH of the mixed product must be specified in the respective pH field if it is lower than 3 or higher than 10.

It is acknowledged that different mixing ratios of components (*e.g.* to achieve different strengths) can lead to pH variations. In case the exact pH cannot be determined for the mixed product then the pH can be expressed in range form of no more than one unit (*e.g.* 9.5 – 10.5).

For the case of **single-component or multi-component hair dyes**, the pH must always be indicated, even if it is within the range of pH 3 to pH 10.

However given pH variations between color shades of the same product, the indication of an exact pH may not be relevant. For these products, the pH of the components and the mixed products can be expressed in range form of no more than one unit (*e.g.* 8.5 – 9.5)

In all cases above, an updated notification is required when the pH declared previously changes by more than 0.5.

For any product or component with a pH higher than 10, the INCI name and concentration of each alkaline agent, and – if applicable – ammonium hydroxide liberator must be specified.

An updated notification is required when either of these concentrations changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

Examples for alkaline agents typically used are:

- sodium/potassium hydroxide
- sodium/potassium metasilicate
- ammonium hydroxide
- sodium/potassium carbonate
- calcium oxide
- ethanolamine

A typical ammonium hydroxide liberator is: ammonium chloride.

▶ Rule 17 – Products containing essential oils, camphor, menthol or eucalyptol

Except for perfume and some limited other product categories, when a manufacturer introduces in a formula essential oils, camphor, menthol or eucalyptol with a total level higher than 0.5%, the total level concentration must be indicated.

If essential oils, camphor, menthol or eucalyptol are not present in the product or if the total level of essential oils, camphor, menthol and eucalyptol does not exceed 0.5%, then 'Not available' must be checked.

For each individual essential oil and camphor, menthol or eucalyptol with a level higher than 0.5% (0.15% in case of camphor), the manufacturer must state the name and quantity of this essential oil/essential oil derivative.

If no individual essential oil, camphor, menthol or eucalyptol are present with a level higher than 0.5% (0.15% in case of camphor), then 'Not available' must be checked.

An updated notification is required when the concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

▶ Rule 18 – Other Ingredients

In addition to the rules above, a number of substances have been identified by European Poison Control Centres as posing a particular concern with regard to an acute poisoning emergency.

The concentration, above the indicated threshold, of any of these ingredients in a formulation must be specified. If no threshold is indicated, the concentration must always be specified.

An updated notification is required when the concentration changes by more than 20% of the value declared previously. If the change is an increase, it shall not exceed the maximum authorised concentrations according to Annexes of Regulation (EC) No 1223/2009.

Glycols and Glycol ethers

BUTETH-2 ACETATE (above 1%)
BUTOXYDIGLYCOL (above 1%)
BUTOXYETHANOL (above 1%)
BUTOXYETHYL ACETATE (above 1%)
DIETHOXYDIGLYCOL (above 1%)
DIPROPYLENE GLYCOL (above 10%)
DIPROPYLENE GLYCOL DIMETHYL ETHER (above 10%)
DIPROPYLENE GLYCOL ISOBORNYL ETHER (above 10%)
ETHOXYDIGLYCOL (above 1%)
ETHOXYDIGLYCOL ACETATE (above 1%)
GLYCOL (above 1%)
GLYCOL ETHERS (not polymers) (above 1%)
METHOXYISOPROPANOL (above 10%)
METHOXYISOPROPYL ACETATE (above 10%)
PPG-2 METHYL ETHER (above 10%)
PPG-2 METHYL ETHER ACETATE (above 10%)
PROPYLENE GLYCOL (above 10%)
PROPYLENE GLYCOL BUTYL ETHER (above 10%)

Hydrocarbons solvents

CYCLOHEXANE (above 5%)
HYDROGENATED DIDODECENE (above 5%)
ISOPENTANE (above 5%)
PENTANE (above 5%)
TOLUENE (above 5%)
TURPENTINE (above 5%)

Alcohols other than ethanol and isopropanol

BENZYL ALCOHOL (above 1%)
FURFURYL ALCOHOL (above 1%)
HEXYL ALCOHOL (above 5%)
N-BUTYL ALCOHOL (above 1%)
PROPYL ALCOHOL (above 1%)
T-BUTYL ALCOHOL (above 1%)

Others

ACETONE (above 5%)	ETHYL ETHER (above 5%)
BENZYL BENZOATE (above 1%)	FORMALDEHYDE (above 0,2%)
BRUCINE SULFATE	HYDROXYLAMINE HCL; HYDROXYLAMINE SULFATE (above 1%)
BUTYL ACETATE (above 1%)	M-CRESOL, O-CRESOL, P-CRESOL, MIXED CRESOLS (above 0,1%)
BUTYROLACTONE (above 0,1%)	MEK (above 5%)
BUTOXYETHYL ACETATE (above 1%)	METHYL ACETATE (above 0,1%)
CHLOROPLATINIC ACID (above 0,1%)	METHYL PYRROLIDONE (above 5%)
COPPER SULFATE (above 0,1%)	MIBK (above 5%)
CYCLOHEXANONE (above 5%)	POTASSIUM CHLORATE (above 0,1%)
DIMETHYLTOLYLAMINE (above 0,1%)	SODIUM CHLORATE (above 0,1%)
ETHYL ACETATE (above 1%)	TRIETHYL PHOSPHATE (above 0,1%)

Responsible persons should also enter in the dedicated CPNP field any other information about the product that would be of significance for Poison Centres or similar bodies, where such centres or bodies have been established by Member States (using English only).

Please note that frame formulations mentioning 'AQUA' also cover products in which water is not added as such as an ingredient but through carry-over from aqueous plant extracts, fruit juices, etc.
